

QUARTERLY ACTIVITIES REPORT ENDED 30 JUNE 2025

Nelson Resources Limited ("Nelson" or "the Company") is pleased to provide shareholders its Activities Report for the quarter ended 30 June 2025.

Highlights:

- ① Initial assay results for rock chip samples collected at the Hidden Treasure Prospect within the Yarri tenements returned greater than **8g/t Au**.
- ① Initial assay results for rock chip samples collected outside of the previously identified mineralisation zone at the Gibbets Prospect within the Yarri tenements returned anomalous and high-grade results of **8.6g/t Au**.
- ① Some samples are over the detection limit and were re-submitted for further assay.
- ① New lithological hosts for gold mineralisation identified within the Yarri mineralised corridor.

OPERATIONS

Yarri Project

The Yarri tenements host numerous Au prospects and workings that form a semi-continuous NW striking gold mineralised zone up to 15km along the margin of the Yarri Monzogranite (Figure 2).

Reconnaissance sampling at two Prospects (Hidden Treasure and Gibberts, Figure 2) yielded significant initial results as presented in Table 1 and ASX announcement dated 23 June 2025. Sampling details for all samples collected are presented in JORC Table 1 in Appendix of the 23 June 2025 1 ASX announcement.

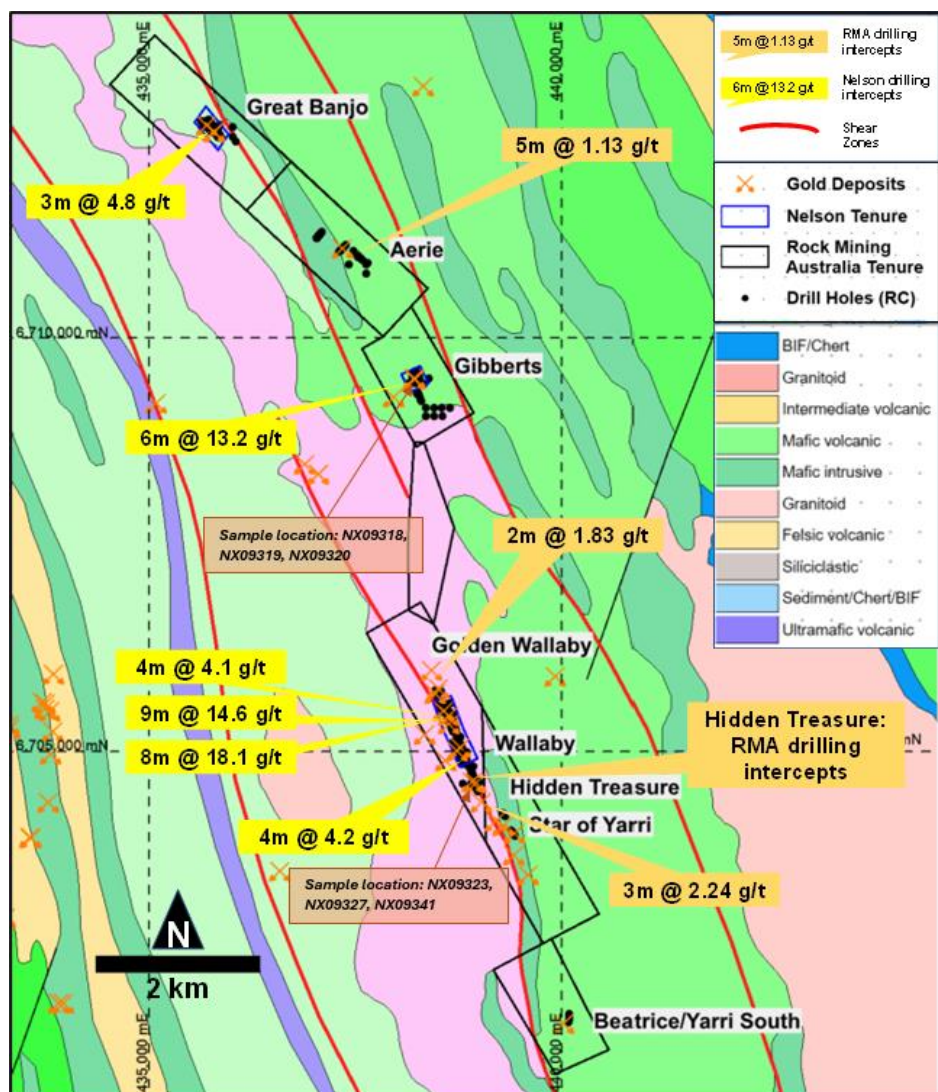

Figure 2: Yarri Project showing recent rock chip sampling locations at Gibberts and Hidden Treasure prospects.

Table 1: Significant initial results from recent rock chip sampling at the Yarri Project

Sample	Easting	Northing	Prospect	Description	Au (g/t)
NX09323	438918	6704620	Hidden Treasure	Millimetre- to cm-scale quartz veins in sheared and sericitised monzogranite with disseminated pyrite	8.6*
NX09327	438930	6704602	Hidden Treasure	Massive (>10cm wide) quartz vein in sheared monzogranite	8.74*
NX09341	438925	6704629	Hidden Treasure	Sericite altered sheared mafic -granite contact with disseminated pyrite and mm-scale shear parallel quartz veining	1.19
NX09319	438227	6709440	Gibberts	Brecciated and mm-scale veined lamprophyre with relict sulphides	0.43
NX09320	438225	6709450	Gibberts	Quartz vein (<2cm) in silicified and sheared mafic rocks	8.6*

* sample submitted for re-assay with results pending

These initial results for rock chip sampling within a historic open pit at the Hidden Treasure Prospect support previous interpretations that mineralisation occurs as veins of varying size largely within the granite (Figures 3A & B).

The sampling also indicates that mineralised veins occur within the sheared mafic volcanic unit, which had not been previously recognised in the area (Figure 3C).

This new understanding in the localisation of veins external to the Yarri monzogranite has implications for potential exploration targets within the mafic units.

Figure 3: Rock chip samples collected at the Hidden Treasure Prospect. A. Sample NX09323: Quartz veining in sheared and sericitized monzogranite with disseminated pyrite. B. Sample NX09327: Quartz vein in sheared monzogranite. C. Sample NX09341: granite contact with sheared and sericite altered mafic volcanic with disseminated pyrite and mm-scale shear parallel quartz veins.

At the Gibberts Prospect, a newly identified brecciated lamprophyre dike (Figure 4A) appears spatially associated with mineralisation and returned anomalous gold results (0.43 g/t Au; see Table 1). Gold mineralised quartz veins (8.6g/t Au; see Table 1) along its sheared contact with mafic volcanic units (Figure 4B) further demonstrates its spatial relationship to mineralisation.

High-grade gold results at both Gibberts and Hidden Treasure exceeded detection limit of the analytical technique and are currently being re-assayed to confirm initial results.
