

## QUARTERLY ACTIVITIES REPORT

QUARTER ENDED 30 June 2025

Iceni Gold Limited (ASX: **ICL**) (**Iceni** or the **Company**) is pleased to provide the following summary of its activities for the three months ended 30 June 2025 at its wholly owned **14 Mile Well Gold Project**, located between Leonora and Laverton.

### Quarter Highlights

- A significant quarter of exploration activity focused along the 11.5km Guyer Trend with **2,572m of diamond** and **14,486m of aircore drilling** completed, yielding the highest-grade drill intersections to date that support the prospect of a growing granite hosted gold system.
- Diamond drilling intersected **multiple downhole intervals of significant gold mineralisation** associated with a broad zone of shallow dipping shear zones within the granite host rock in four of the 6 holes that evaluated structural targets over a 2000m strike length.
- Significant results from the diamond drilling include:
  - **3.65m @ 7.46 g/t Au from 151.6m in GUYDD0006, including 0.5m @ 50.2 g/t Au from 153.5m**
  - **6.52m @ 2.63 g/t Au from 297.2m in GUYDD0001, including 1.32m @ 6.59 g/t Au from 300.68m and 0.75m @ 7.61g/t Au from 302.97m**
- An extensional AC drilling program intersected multiple **downhole intervals of significant gold mineralisation** from holes on five infill drill traverses that include:
  - **4m @ 7.84 g/t Au from 8m in GUYAC0221**
  - **6m @ 2.98 g/t Au from 76m to EOH in GUYAC0135, including 4m @ 4.35 g/t Au from 76m**
  - **4m @ 4.21 g/t Au from 52m in GUYAC0169**
- The AC results have outlined **three new robust +1,200m long +0.1 g/t gold bedrock anomalies** hosted by the granite within the broader 11.5km long trend.
- The combined results, aided with structural data from the diamond drilling, support and reinforce the primary controls on the granite hosted gold mineralisation that has provided guidance for a **11,700m RC drill program** now underway.
- The Company completed a heavily oversubscribed share placement to raise **\$2.5 million** (before costs) from sophisticated and institutional investors.
- As at 30 June 2025 the Company had cash reserves of **\$4.2 million** and no debt.

## 14 Mile Well Gold Project

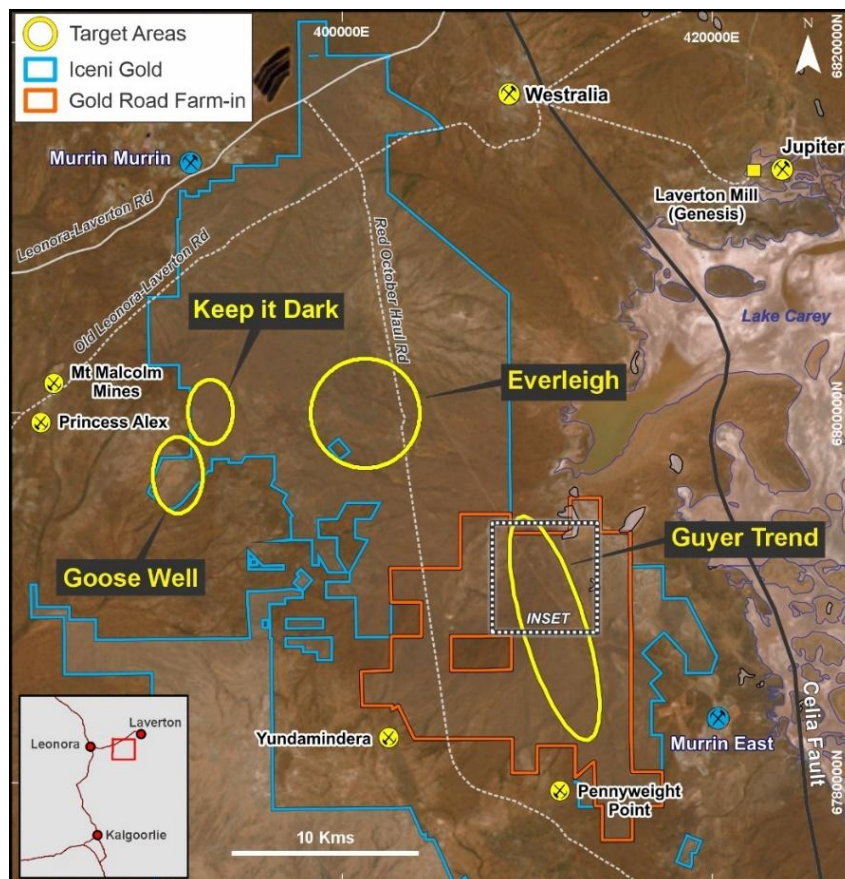

Iceni Gold Limited is a Perth based exploration company that is actively exploring for gold at the 14 Mile Well Gold Project (14MWGP) situated in the Leonora-Laverton Greenstone Belt, in Western Australia. The large wholly owned contiguous tenement package covers ~850km<sup>2</sup> located on the western side of Lake Carey, approximately midway between the plus million-ounce gold mining centres of Laverton and Leonora. The project adjoins (Figures 1 and 8) the Laverton Gold Operation, which contains the Jupiter and Westralia gold deposits, owned by Genesis Minerals Limited (ASX:GMD).

## Project and Activities

During the June Quarter the Company continued its strong exploration focus at the Guyer Well Trend (Guyer or Guyer Trend), where a successful seven hole/2572.4m diamond drill program and a 221hole/14,486m AC drill campaign along the Guyer Trend were completed. Guyer is the primary focus of the \$35 million Farm-In exploration agreement with Gold Road Resources Limited (ASX: GOR) that commenced on 18 December 2024 in respect of 154km<sup>2</sup> of tenements (**Farm-In Area**), that form part (Figures 1 and 8) of the Company's 100%-owned 14MWGP (ICL ASX release 18 December 2024). In addition, assay results were received and announced for the remaining 15 RC holes from the 31-hole program completed at Guyer in the prior quarter.

## Guyer Well Trend

The Guyer Trend is located in the southeastern part of the 14MWGP (Figure 1). It was one of four key target areas identified from an internal targeting review in May 2024 that identified priority areas to focus exploration on during CY2024 for a gold discovery. The Guyer Trend lies over a northerly striking belt of mafic greenstone sequences, bounded by the Danjo Granite to the west and to the east by intermediate volcanic rocks (Figure 2).

**Figure 1** Map of the 14 Mile Well Gold Project area, highlighting the location of the Guyer Trend, the GOR Farm-In package and other key target areas.

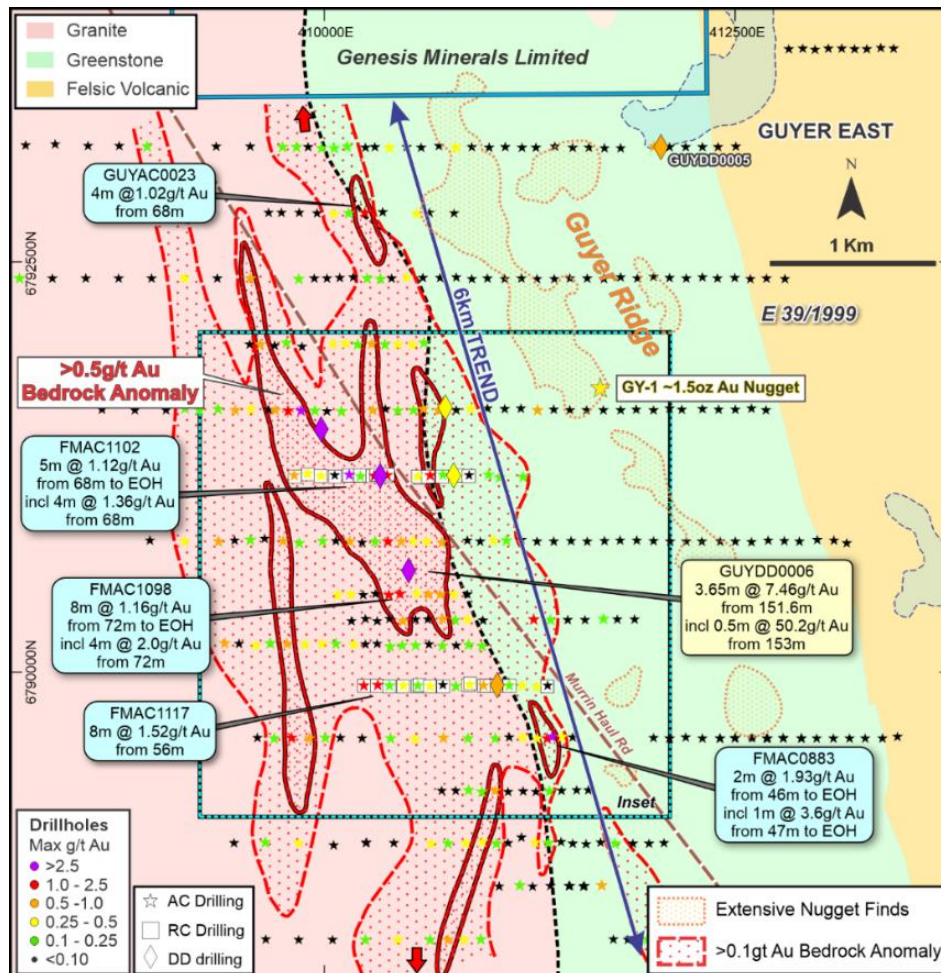

The exploration programs that commenced at Guyer in February 2025 are fully funded, being part of the **\$5 million (Minimum Obligation) exploration commitment** required under the terms of the Farm-In Agreement.

Guyer has been a focus of exploration by the Company since June 2021, conducting extensive surface sampling, metal detecting and AC drilling (ICL ASX release 30 November 2022), primarily along a belt of sub-cropping mafic rocks along and to the south of the Guyer Ridge (refer Figure 2).

Geophysical gravity and magnetics data suggest that the *Guyer Trend* is part of a broader northwest trending shear zone corridor (**Guyer Shear**) that is interpreted by the Company to extend from the granite-greenstone contact east to include Guyer Ridge and Guyer East.

### Diamond Drill Program

Following completion of the initial RC program in April 2025, the Company commenced a 6-hole diamond drilling program later that month aimed at establishing the structural controls on gold mineralisation to provide vectors to target zones of economic mineralisation in the primary zone of the granite host rock (ICL ASX release 22 July 2025). The holes (Figure 2) were designed based on interrogation of drillhole results and aeromagnetic data. The six holes were orientated to test and confirm interpreted flat east dipping structures over a 2000m strike length, primarily based on interpretation of the results from the two RC drill traverses spaced 1500m apart.

**Figure 2** Guyer North drillhole and geology plan highlighting the bedrock gold anomalies defined from aircore drilling adjacent to the granite-greenstone contact and location of diamond holes. Refer to Figure 3 for detailed RC and diamond drillhole location plan.

In addition to the 6 holes at Guyer, a single diamond hole was completed at Guyer East (Figure 2) to evaluate the primary zone beneath AC hole FMA0839 drilled in 2022 that intersected 4m @ 0.67 g/t Au from 20m on the edge of a salt lake (ICL ASX release 30 November 2022). The collar of the hole was located approximately 400m east of Guyer Ridge, which is the site of significant finds of gold nuggets.

The program was completed in June, with all seven planned drillholes being completed for 2,572m, including the single hole at Guyer East. The six drillholes undertaken at the main Guyer bedrock gold anomaly (Figures 2 and 3) to evaluate and provide structural information on the primary controls on gold mineralisation within the granite host were completed on four sections that cover approximately 2000m of strike.

The assay results (ICL ASX release 22 July 2025) from the 6-hole diamond program delivered some of the highest grades to date at Guyer. Importantly, the wide spaced drillholes successfully intersected high-grade gold mineralisation in fresh rock (primary zone) hosted by multiple shallow north-east dipping shears within the granite host over at least 1500m.

Furthermore, despite the wide spacing between the diamond holes, these shears are interpreted to form a broad (+500m wide) north-west trending zone, the limits of which are yet to be defined. Significant results from the program include:

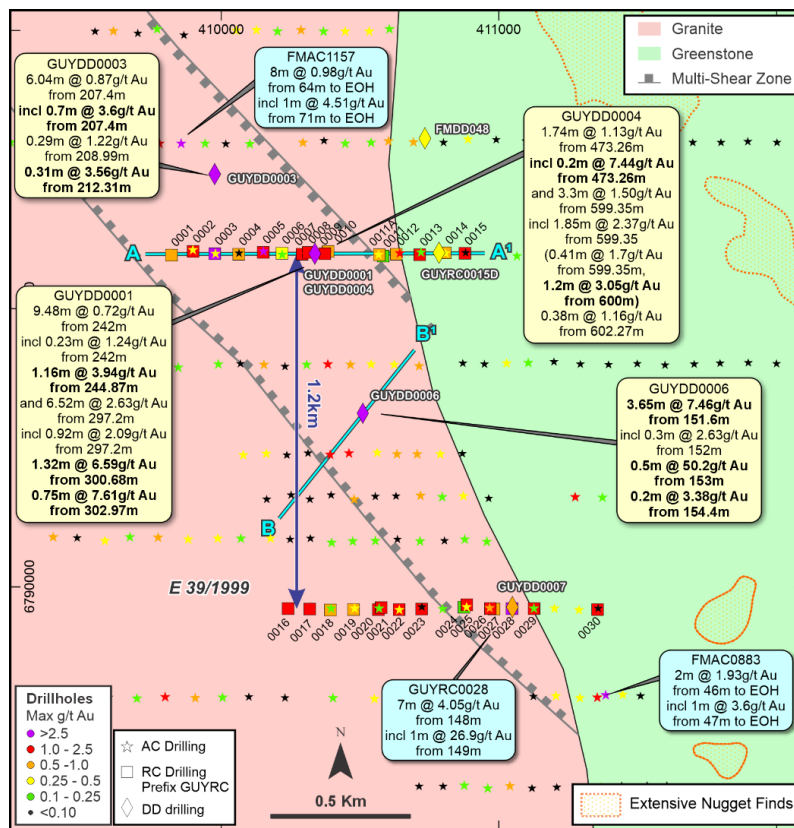

- **3.65m @ 7.46 g/t Au from 151.6m in GUYDD006,**  
**including 0.3m @ 2.63 g/t Au from 152m,**  
**0.5m @ 50.2 g/t Au from 153.5m and**  
**0.2m @ 3.38 g/t Au from 154.4m**
- **6.52m @ 2.63 g/t Au from 297.2m in GUYDD001,**  
**including 0.92m @ 2.09 g/t Au from 297.2m,**  
**1.32m @ 6.59 g/t Au from 300.68m and**  
**0.75m @ 7.61g/t Au from 302.97m**
- **1.88m @ 1.09 g/t Au from 303.92m in GUYDD003,**  
**including 0.2m @ 9.86 g/t Au from 303.92m**

The drilling has supported an interpreted broad zone (multi shear zone) consisting of multiple narrow shallow dipping, north-west trending shears hosted within the granite (Figure 3). Significant gold mineralisation is related to these structures.

The strike and down dip continuity of individual shears is yet to be fully established given the wide spaced nature of the diamond drilling. In addition, the relationship between shallow dipping shears and intersection with the steep east dipping granite-greenstone contact (Figure 4) is unclear, but this structural position is considered by the Company to be a priority target for further diamond drilling.

The overall structural geometry of the shallow dipping structures identified at Guyer and relationship with steep dipping intrusives (porphyry dykes) and the contact is yet to be resolved but considered a favorable setting for not only shallow dipping structures, but also steeper dipping of geometries of gold mineralisation.

The Company considers this change in structural orientation (flat to steep) and potentially broader higher-grade zones of mineralisation may occur near to the granite-greenstone contact and is a target area for further drilling.

**Figure 3** Drillhole and geology plan at Guyer highlighting location of the diamond drillholes with key gold intersections relative to the RC drill traverses adjacent to the granite-greenstone contact. The interpreted position and orientation of the broad zone of shears is also shown. Refer to Figure 4 for drill section AA'.

**Figure 4** Drill section 6787550mN highlighting geology, depth of transported cover and recent diamond drill intercepts and interpreted shear zones.

## May-June AC Drill Program

A major AC drill campaign (ICL ASX release 9 July 2025) comprising 221 vertical holes for 14,487m of drilling was completed in June 2025 to infill and extend beyond the broader 6km long main Guyer ("Guyer Main") bedrock gold anomaly (ICL ASX release 9 July 2025). The Guyer Main anomaly is a large >0.1g/t Au anomaly, which is defined over a 6km strike length (ICL ASX release 12 November 2024) at the northern end of the 11.5km granite-greenstone contact.

The AC drilling program at Guyer consisted of multiple drill traverses ("sections") primarily aimed at evaluating western extensions to Guyer Main, by extending eight existing traverses and also infill drilling to the south along strike with nine infill drill traverses. The entire 11.5kms of the Guyer granite-greenstone contact is now covered by AC drill traverses with nominal 400m section spacing (Figure 5).

The major dual focussed AC drill campaign delivered further significant and high-grade gold results from the composite sample intervals that further reinforce and expand the Guyer bedrock anomaly along the entire 11.5km length along the granite-greenstone contact. At Guyer Main the results from the drilling have extended the broad plus 0.1g/t Au anomaly at least 400m further west and well into the granite host, with it now having a width of approximately 1,500m and it is approximately 5kms long.

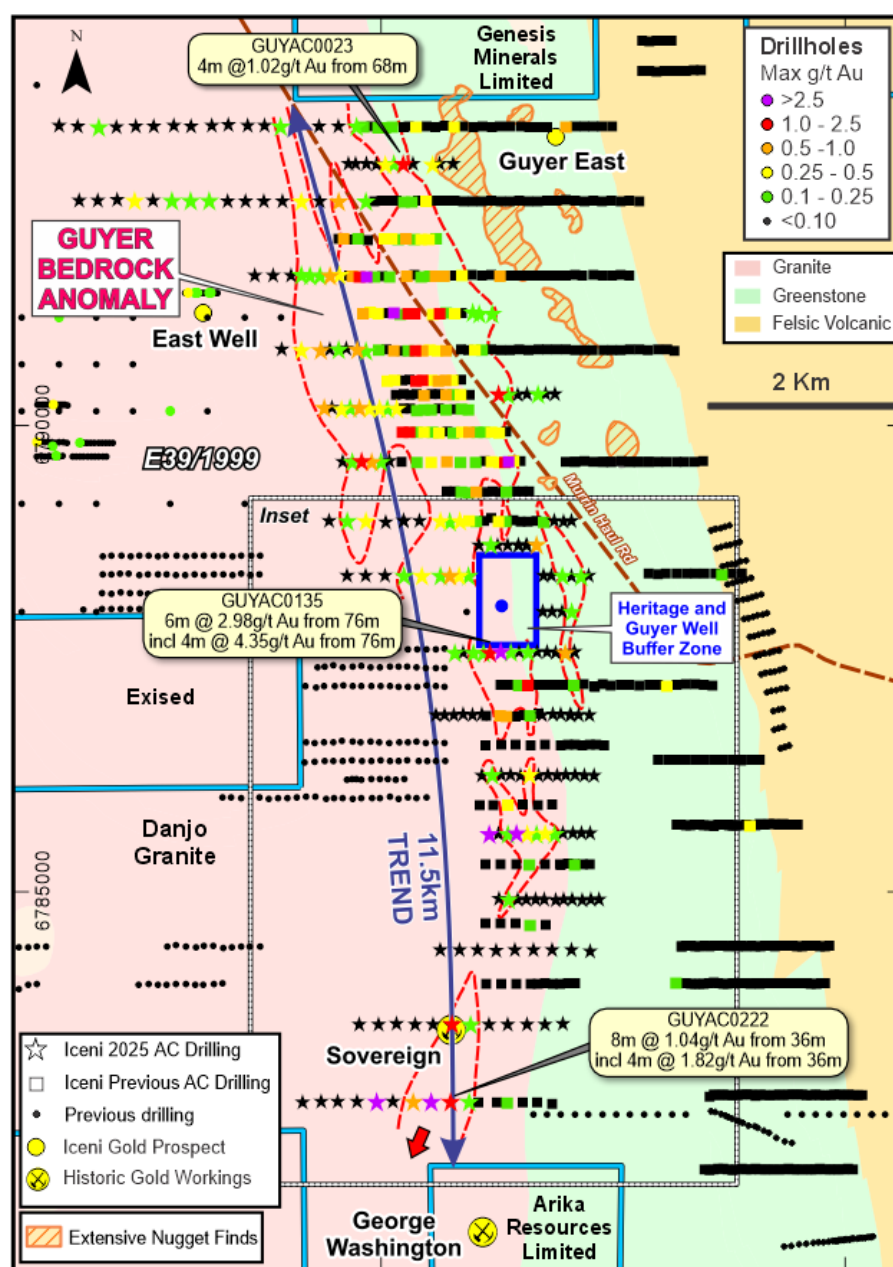

This new drilling has also generated **three new gold anomalies (>0.1 g/t Au)** south of Guyer Main, each having a strike length of approximately 1,200m, with the southernmost one open along strike (Figure 5). Significantly, each of these three new anomalies have similar dimensions and have intersected high-grade gold mineralisation that includes the best ever Guyer AC intercept of **4m @ 7.84 g/t Au from 8m in GUYAC0221** that is open to the south.

Notably, eleven holes from this program intersected sample intervals with gold mineralisation exceeding 1.00 g/t Au, **with multiple strong intersections, including 6m @ 2.98 g/t Au from 76m to EOH in GUYAC0135 and 8m @ 1.04 g/t Au from 64m to EOH in GUYAC0172.**

Significant results from the program include:

- **4m @ 7.84 g/t Au from 8m in GUYAC0221**
- **6m @ 2.98 g/t Au from 76m to EOH in GUYAC0135,**  
*including 4m @ 4.35 g/t Au from 76m*
- **4m @ 4.21 g/t Au from 52m in GUYAC0169**
- **8m @ 0.66 g/t Au from 32m in GUYAC0207,**  
*including 4m @ 1.16 g/t Au from 36m*
- **26m @ 0.45 g/t Au from 52m to EOH in GUYAC134,**  
*including 4m @ 1.14 g/t Au from 60m*
- **8m @ 1.04 g/t Au from 64m to EOH in GUYAC0172,**  
*including 2m @ 2.77 g/t Au from 68m*
- **8m @ 1.04 g/t Au from 36m in GUYAC0222,**  
*including 4m @ 1.82 g/t Au from 36m*

The new results further strengthen, enhance and expand the anomalous gold trend at Guyer along and near to the granite-greenstone contact. The Company is highly encouraged by the recent results, some of which are the highest grades seen at Guyer from AC drilling and considers this to be a significant new bedrock gold trend hosted by granite in the Eastern Goldfields. A large RC program is now underway to evaluate the anomalous trend, including two of the new southern anomalies.

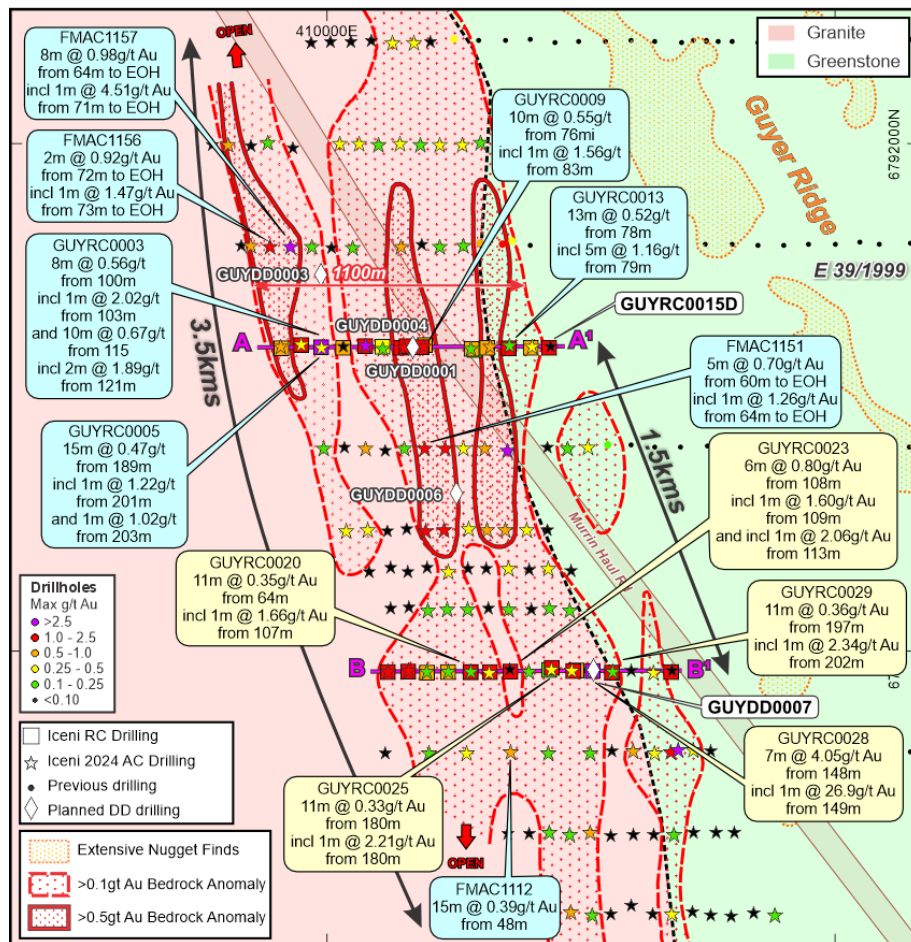

**Figure 5** Guyer Trend drillhole and geology plan highlighting the bedrock gold anomalies adjacent to the granite-greenstone contact over a 11.km strike, with the 2025 aircore holes.

### RC Drill Campaign

During the quarter final assay results were received and reported for the remaining 15 holes of the maiden 31 RC drillhole campaign completed on two 1,500m spaced drill sections that evaluated the **broad 3,500m long bedrock gold anomaly** at Guyer (ICL ASX release 6 May 2025).

The RC program was designed as a two-phase program to test the large (3,500m long) Guyer aircore anomaly at the northern end of the 11kms of the granite-greenstone contact (Figure 6). The anomaly was evaluated by 31 holes (Refer Table 2 ICL ASX release 6 May 2025) for 6,420m drilled on two east-west traverses (drill sections) located approximately 1,500m apart (Figure 5) within the 3500m long bedrock gold anomaly. Program details and results from the first 16 holes from line 1 were announced on 15 April 2025. The second and southernmost RC traverse consisted of 15 holes for 3089m (Figure 6) and announced 6 May 2025.

**Figure 5** Geological map and drillholes completed at Guyer North showing the 2025 RC drillholes, 2024 AC drillholes, significant gold results and the interpreted >0.1gt/t and >0.5 g/t Au bedrock gold anomalies. Refer to Figure 6 below for drillhole cross-sections BB'.

Very encouraging gold assay results were returned for the 15 holes completed on drill Section 2 (Figures 5 and 6). This includes a **significant high-grade intersection** of:

**7m @ 4.05g/t Au from 148m, including 1m @ 26.9g/t Au from 149m in GUYRC0028,**

the best and highest-grade gold intercept from Guyer to date. The 149m–150 m interval, which returned 26.9 g/t Au, contains approximately 90% quartz–carbonate–chlorite–pyrite–galena veining, hosted within a strongly sheared and altered Danjo granodiorite. The host granodiorite exhibits strong sericite–hematite–silica–chlorite–pyrite alteration.

Significantly, the high-grade intersection is supported by additional multiple anomalous (>0.1 g/t Au) gold intercepts throughout the entire length of the drillhole, associated with variations of intensity and widths of sericite–hematite–silica–chlorite–pyrite alteration. This includes an intersection of 16m @ 0.22g/t Au from 222m to end of hole (EOH) in GUYRC0028 (Figure 6).

Additional to hole GUYRC0028, other encouraging gold intersections of variable downhole width were intersected in every hole across the 1000m wide transect. Similar to GUYRC0028, the anomalous gold intercepts are related to varying intensities of sericite–hematite–silica–chlorite–pyrite alteration and quartz veining within the granodiorite host rock (Figures 3 and 4).

These alteration zones are interpreted to be associated with multiple interpreted flat, east dipping potentially stacked structures (Figure 6). These flat lying gold mineralised structures are a characteristic feature of gold deposits within the Laverton-Leonora area (e.g. Wallaby, Jupiter).

Other significant notable gold intersections include:

- **16m @ 0.50 g/t Au from 53m in GUYRC0028, including 1m @ 3.99 g/t Au from 64m**
- **11m @ 0.36 g/t Au from 197m in GUYRC0029, including 1m @ 2.34g/t from 202m**
- **6m @ 0.80 g/t Au from 108 in GUYRC0023, including 1m @2.06 g/t Au from113m**
- **11m 0.35 g/t Au from 64m in GUYRC0020, including 1m @ 1.66 g/t Au from 107m**
- **11m 0.33 g/t Au from 180m in GUYRC0025, including 1m @ 2.21 g/t Au from 180m**
- **8m 0.40 g/t Au from 64m in GUYRC0017, including 2m @ 1.08 g/t Au from 64m**

**Figure 6** Drillhole cross-section BB' on 6789920mN displaying 15 RC holes drilled on section 2 at Guyer. Significant intercepts for six RC holes are displayed.

The drilling on both sections has defined two main alteration assemblages, pervasive hematite, carbonate, silica and pyrite (sometimes associated with minor sericite) alteration (of the host granodiorite contained), and sericite, silica, carbonate, pyrite alteration often associated with thin shears throughout the wider granodiorite and higher gold grades.

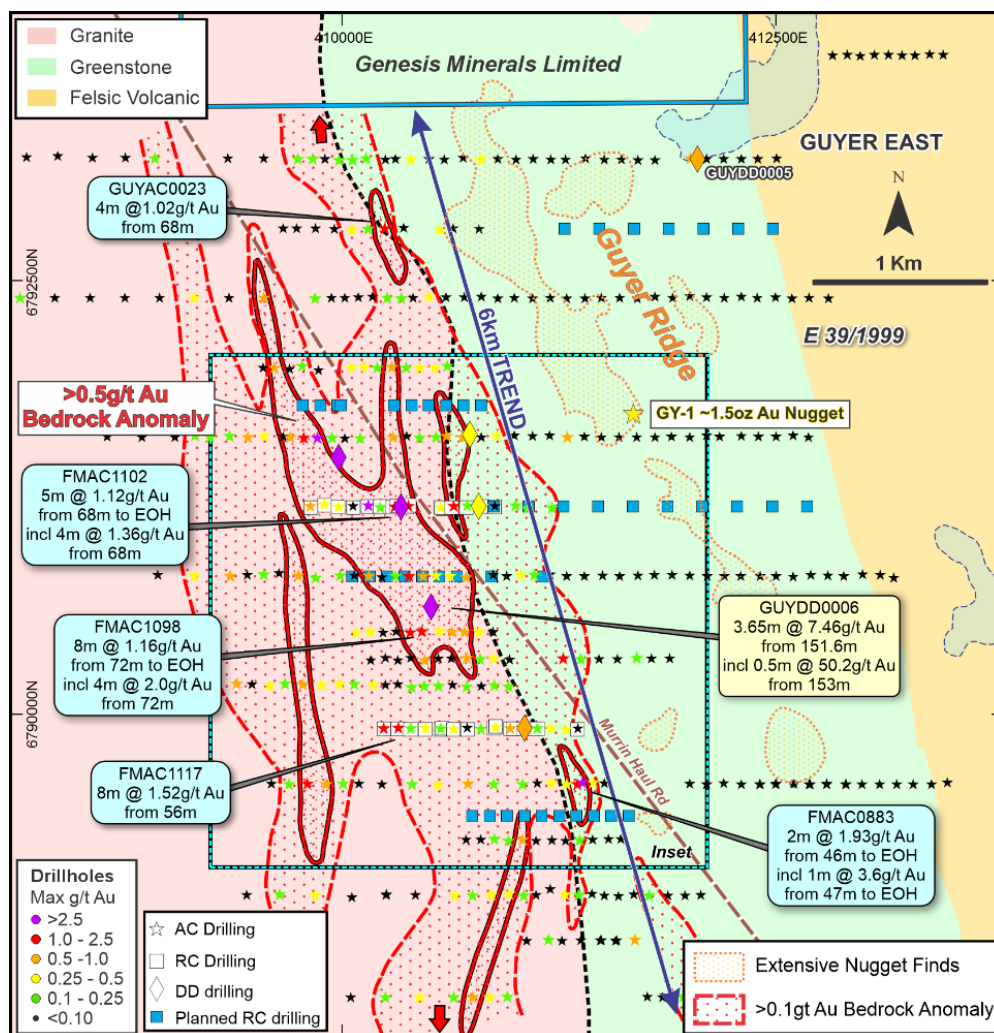

This wide spaced (2 Traverses 1,500m apart) drill program has outlined an extensive zone of alteration and gold mineralisation within the granodiorite host rock over a ~1,000m by ~1,500m area. This large, broad, pervasive altered corridor throughout the Danjo granodiorite, with associated lamprophyre and intermediate porphyry intrusions, is considered to be very encouraging and signifies the potential for a significant gold system within the 14 Mile Well Gold Project.

## Guyer Work Program

Subsequent to the end of the June Quarter, the Company announced (ICL ASX release 24 July 2025) the commencement of a major dual-focussed ~17,000m drilling program within the Guyer Farm-In Area to follow up and build upon the results from exploration programs conducted in the first half of 2025. The exploration approach will maintain evaluation of the major gold anomaly along the 11.5km granite-greenstone contact but also undertake initial early-stage exploration at Guyer West and at Guyer Ridge to expand assessment of the potential within the wider Guyer area.

The **16,700m drill program** is underway, having commenced with a short focussed **4,000m AC drill evaluation** of the western margin of the Danjo Granite, known as Guyer West. This target is a mirror image of the eastern granite-greenstone contact where prior surface sampling (rock chips and soils) defined a large gold anomaly coincident with an embayment within the granite. Seventy-three vertical drillholes on seven east-west drill traverses will evaluate this structural and geochemical target which straddles the granite-greenstone contact over an approximate area of 4kms (north-south) by 2kms (east-west). The program is expected to take 10 days to complete, with initial assay results due in August.

On completion of the AC drilling, a **12,700m RC drill program** will commence to test multiple targets along the Guyer Trend (Figure 7), located on the eastern margin of the Danjo Granite, which were generated from recent AC, RC and diamond drilling.

**Figure 7** Guyer North drillhole and geology plan highlighting the bedrock gold anomalies defined from aircore drilling adjacent to the granite-greenstone contact and location of planned RC holes over the main anomaly and Guyer Ridge.

Along the main Guyer Trend, **51 RC holes** located on five east-west traverses will test priority structural and geochemical targets for a total of 11,000m (Figure 7) testing targets as follows:

- Three drill traverses, each approximately 1000m in length, will test the main Guyer anomaly over approximately a 3km strike length.
- Two single drill traverses will each test the two new bedrock gold anomalies, located along strike to the south of Guyer Main as a first pass evaluation. Each traverse will be approximately 1000m long, with planned 200m deep holes located at 100m centres along the traverse.

In addition to the five RC traverses along the granite-greenstone contact (Guyer Main), a further two traverses, totalling **17 RC holes for 1700m**, will test the mafic stratigraphy straddling the Guyer Ridge (Figure 7). The flanks of, and the Guyer Ridge itself, are the sites of extensive gold nugget finds, (ICL ASX release 19 June 2025) which have only been tested to date by wide spaced (+1000m), shallow AC drill lines. Each east-west traverse will be at least 1000m long, with holes spaced at 200m centres and a planned depth of 100m.

The RC drilling is scheduled to commence shortly and to be completed in September. Initial assay results from the RC program are expected in late August, with final results expected approximately 4 weeks after completion of the program.

## Welcome Creek Project

The Welcome Creek project now consists of two adjoining Exploration Licences (E45/6936 and E45/7112) covering 393km<sup>2</sup>, held by the Company and located in the Great Sandy Desert. The Licences are located approximately 260kms northeast of Newman and 140kms south of Telfer and are easily accessible via the Talawana track from Newman (Figure 8).

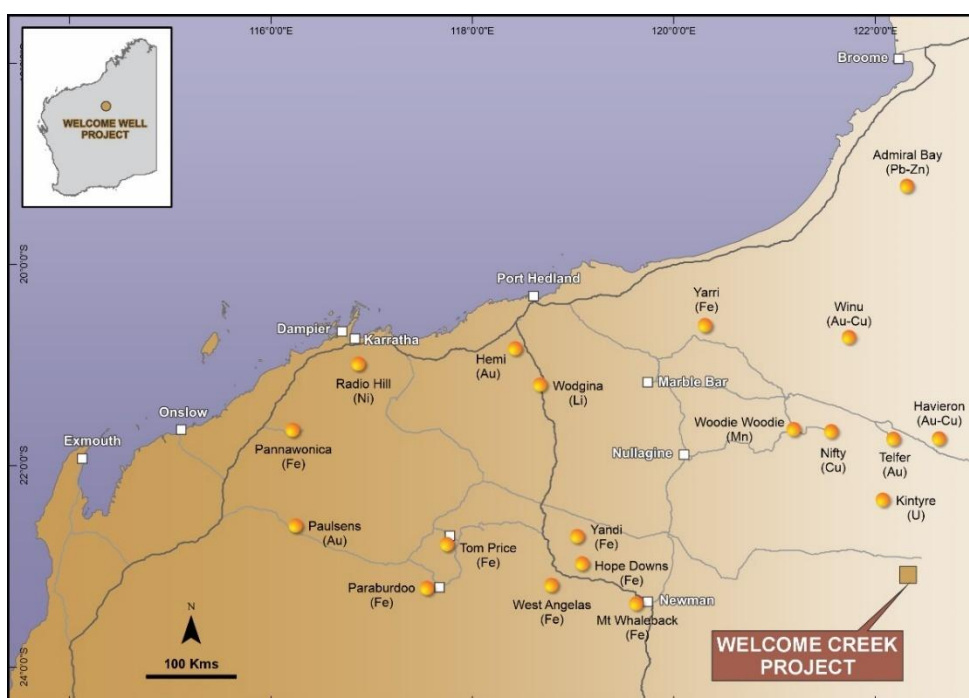

Granted Exploration Licence E45/6936 was pegged by the Company in April 2024 to cover a large coincident gravity and magnetic anomaly located beneath at least 700m of cover within the northern part of the Officer Basin. The anomaly is considered by the Company to be an intrusive into the basement rocks and prospective for gold-copper mineralisation.

In 1994 Normandy Poseidon Exploration drilled a single diamond hole, LDDH001, to 701m to test a modelled geophysical anomaly. The rock units and magnetic susceptibility measurements failed to explain the anomaly. No further drilling has been completed at Welcome Creek to evaluate and explain the coincident magnetic-gravity anomaly.

In March and April 2025, the Company completed two helicopter reconnaissance field trips to the Licence area to assess access to the site, and primarily to locate the drill site for historic hole LDDH001. Access to the site is relatively good and the site, despite being 30 years old, was located (refer ICL ASX release 30 April 2025). The drill collar for LDDH001 was also found, is in good condition and considered suitable for re-entry.

During the June Quarter the Company completed two reconnaissance field trips to determine a more suitable access route to the old drill site in preparation for a Heritage Survey that is scheduled to commence in early August. Subsequent to heritage clearance, the Company is proposing to re-enter LDDH001 and extend it to at least 1200m to evaluate the geophysical anomaly. Planning and scheduling for the drilling program is well advanced.

**Figure 8** Location map of the Welcome Creek Project relative to Newman and Telfer.

## Corporate & Finance

### Cash Position

As at 30 June 2025 the Company had cash reserves of \$4.2 million and no debt (refer to section 5.5 of Appendix 5B June 2025 Quarterly Cash flow report).

During the Quarter the Company successfully raised \$2.5 million before costs in a share placement supported by existing shareholders and Iceni directors, in addition to new investors. (ICL ASX release 11 June 2025).

Cash flows relating to the Quarter included ~\$3.74 million (refer 8.3 Appendix 5B) spent on exploration expenditure, tenement costs, employees, contractors and administration costs, which are primarily associated with mineral exploration within the 14 Mile Well Gold and Welcome Creek Projects. This includes the outgoings in respect of the Company's Guyer project for which the Company is fully reimbursed in accordance with the terms of the Farm-In Agreement with GOR.

The most significant outgoing amount contributing to the total exploration and evaluation value for the June quarter related to the Company's ongoing drilling programs and related field costs at Guyer.

No expenditure was incurred on mining production or development activities during the quarter.

For the purposes of section 6 of the Appendix 5B, all payments made to related parties are for director fees and salaries, office rent, administration services and geological consulting services.

## Tenement Status

During the quarter, the Company did not purchase or acquire any tenements. The Company confirms that all its tenements remain in good standing as at the end of the June Quarter CY2025.

During the June Quarter the Company applied for three Mining Lease Applications (MLA's) and one Exploration Licence at the 14MWGP. Fourteen Prospecting Licences expired at the end of their 8 year term and the Company. The MLA's cover expiring Prospecting Licences held by the Company.

In addition, during the Quarter the Company applied for an additional Exploration Licence E45/7112 at the Welcome Creek Project located approximately 150kms south of Telfer. The new tenement adjoins the existing granted licence E45/6936.

Details of the tenements and their locations are set out in Annexure A.

## Exploration Outlook

The Company has a large contiguous landholding, known as the 14 Mile Well Gold Project, considered **highly prospective for gold mineralisation** and central to the regional mining centres of Leonora and Laverton that **host a 50Moz gold endowment**.

Exploration during the September 2025 Quarter will continue to focus on the Guyer Trend (Guyer) under the terms of the Farm-In agreement with GOR. As previously noted in this report, a 13,700m RC drill campaign is planned to commence in early August.

Additional to exploration at Guyer, the Company is preparing initial exploration AC programs over other areas at 14 Mile Well, including Tatong South. As previously noted, a Heritage Survey is planned to commence shortly at Welcome Well, that is the precursor to scheduling extending drillhole LDDH001.

Authorised by the board of Iceni Gold Limited.

## About Iceni Gold Limited

Iceni Gold Limited (Iceni or the Company) is an active gold exploration company that is focussed on two key projects in Western Australia. The primary focus is the 14 Mile Well Gold Project located in the Laverton Greenstone Belt and situated midway between the gold mining townships of Leonora and Laverton within 75kms of multiple high tonnage capacity operating gold mills (Figure 6). The Company also holds Exploration Licences covering the Welcome Creek Au-Cu target located approximately 140km south of Telfer in the Paterson Province.

The Company continues to be focussed on multiple high priority target areas within the ~850km<sup>2</sup> 14 Mile Well tenement package (Figure 6). The large contiguous tenement package is located on the west side of Lake Carey and west of the plus 1-million-ounce gold deposits at Mount Morgan, Granny Smith, Sunrise Dam and Wallaby. The 14 Mile Well Gold Project makes Iceni one of the largest landholders in the highly gold endowed Leonora-Laverton district.

The majority of the tenements have never been subjected to systematic geological investigation. Iceni is actively exploring the project using geophysics, metal detecting, surface sampling and drilling. Since May 2021 this foundation work has identified priority gold target areas at Everleigh, Goose Well, Keep It Dark and the 15km long Guyer Trend (Figure 1). The Guyer Trend is part of a group of tenements that are subject to a Farm-In Agreement and potential Joint Venture with Gold Road Resources announced on 18 December 2024.

**Figure 8:** Map highlighting the location of the Iceni Gold 14 Mile Well Project the central to the mining centres of Leonora and Laverton in the Eastern Goldfields of Western Australia.

## Significant Announcements

The Company released several significant ASX announcements during and after the quarter end that are relevant to the June 2025 quarterly report:

- **24 July 2025** Multi Target Drilling Program Underway at Guyer
- **22 July 2025** Diamond Drilling Intersects High-Grade Gold at Guyer
- **9 July 2025** High-Grade Drill Intersections Strengthen Guyer Gold Trend
- **20 May 2025** Exploration Update: Aircore Drilling Underway at Guyer
- **6 May 2025** RC Drilling Delivers High-Grade Gold Intersection at Guyer
- **29 April 2025** Fast-Tracking Exploration at the 14 Mile Well Gold Project
- **17 April 2025** Extensive Gravity Survey Underway at Guyer
- **15 April 2025** RC Drill Results Continue to Expand Guyer Footprint

### LISTING RULE 5.23

The information contained in this report relating to exploration results and exploration targets has been previously reported by the Company (Announcements). The Company confirms that it is not aware of any new information or data that would materially affects the information included in the Announcements.

## Annexure A – Tenement Status

5.3	Bank overdrafts	-	-
5.4	Bank balance attributable to farm-in agreement	552	889
5.5	Cash and cash equivalents at end of quarter (should equal item 4.6 above)	4,199	3,469

6.	Payments to related parties of the entity and their associates	Current quarter \$A'000
6.1	Aggregate amount of payments to related parties and their associates included in item 1	(180)
6.2	Aggregate amount of payments to related parties and their associates included in item 2	(37)
Amounts are for Directors' fees, payroll, administrative services and office rent		

## Mining exploration entity or oil and gas exploration entity quarterly cash flow report

7.	<b>Financing facilities</b>	<b>Total facility amount at quarter end \$A'000</b>	<b>Amount drawn at quarter end \$A'000</b>
	<i>Note: the term "facility" includes all forms of financing arrangements available to the entity. Add notes as necessary for an understanding of the sources of finance available to the entity.</i>		
7.1	Loan facilities	1,000	-
7.2	Credit standby arrangements	-	-
7.3	Other (please specify)	-	-
7.4	<b>Total financing facilities</b>	<b>1,000</b>	<b>-</b>
7.5	<b>Unused financing facilities available at quarter end</b>		1,000
7.6	Include in the box below a description of each facility above, including the lender, interest rate, maturity date and whether it is secured or unsecured. If any additional financing facilities have been entered into or are proposed to be entered into after quarter end, include a note providing details of those facilities as well.		
	A finance facility of \$1.0 million is held with Toyota Australia for the purpose of equipment financing, when required. The facility is unutilised at present but, when utilised, is secured by the equipment purchased under the associated equipment finance agreements and a further company guarantee in favour of Toyota Finance from 100% owned subsidiary 14 Mile Well Gold Pty Ltd. In addition, Icen Gold Limited has provided a bank guarantee to Toyota Finance for \$150,000.		

8.	<b>Estimated cash available for future operating activities</b>	<b>\$A'000</b>
8.1	Net cash from / (used in) operating activities (item 1.9)	(367)
8.2	(Payments for exploration & evaluation classified as investing activities) (item 2.1(d))	(3,374)
8.3	Total relevant outgoings (item 8.1 + item 8.2)	(3,741)
8.4	Cash and cash equivalents at quarter end (item 4.6)	4,199
8.5	Unused finance facilities available at quarter end (item 7.5)	1,000
8.6	Total available funding (item 8.4 + item 8.5)	5,199
8.7	<b>Estimated quarters of funding available (item 8.6 divided by item 8.3)</b>	1.24
	<i>Note: if the entity has reported positive relevant outgoings (ie a net cash inflow) in item 8.3, answer item 8.7 as "N/A". Otherwise, a figure for the estimated quarters of funding available must be included in item 8.7.</i>	
8.8	If item 8.7 is less than 2 quarters, please provide answers to the following questions:	
	8.8.1 Does the entity expect that it will continue to have the current level of net operating cash flows for the time being and, if not, why not?	
	The amount shown at 8.2 includes the outgoings in respect of the Company's Guyer Project for which the Company is fully reimbursed in accordance with a farm-in agreement that it has with Gold Road Resources Ltd (ASX : GOR). Excluding cash flows and cash balances relating to the farm-in agreement, the Company is estimated to have 2.54 quarters of funding available for its non-Guyer Project related activities.	
	8.8.2 Has the entity taken any steps, or does it propose to take any steps, to raise further cash to fund its operations and, if so, what are those steps and how likely does it believe that they will be successful?	
	N/A Refer response to 8.8.1	

## Mining exploration entity or oil and gas exploration entity quarterly cash flow report

8.8.3 Does the entity expect to be able to continue its operations and to meet its business objectives and, if so, on what basis?

Yes. Refer response to 8.8.1

*Note: where item 8.7 is less than 2 quarters, all of questions 8.8.1, 8.8.2 and 8.8.3 above must be answered.*

## Compliance statement

- 1 This statement has been prepared in accordance with accounting standards and policies which comply with Listing Rule 19.11A.
- 2 This statement gives a true and fair view of the matters disclosed.

Date: 29 July 2025

Authorised by: The Board of Directors

## Notes

1. This quarterly cash flow report and the accompanying activity report provide a basis for informing the market about the entity's activities for the past quarter, how they have been financed and the effect this has had on its cash position. An entity that wishes to disclose additional information over and above the minimum required under the Listing Rules is encouraged to do so.
2. If this quarterly cash flow report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report. If this quarterly cash flow report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.
3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.
4. If this report has been authorised for release to the market by your board of directors, you can insert here: "By the board". If it has been authorised for release to the market by a committee of your board of directors, you can insert here: "By the [name of board committee – eg Audit and Risk Committee]". If it has been authorised for release to the market by a disclosure committee, you can insert here: "By the Disclosure Committee".
5. If this report has been authorised for release to the market by your board of directors and you wish to hold yourself out as complying with recommendation 4.2 of the ASX Corporate Governance Council's *Corporate Governance Principles and Recommendations*, the board should have received a declaration from its CEO and CFO that, in their opinion, the financial records of the entity have been properly maintained, that this report complies with the appropriate accounting standards and gives a true and fair view of the cash flows of the entity, and that their opinion has been formed on the basis of a sound system of risk management and internal control which is operating effectively.
