Company Announcements Office ASX Limited

# QUARTERLY ACTIVITIES REPORT FOR THE PERIOD ENDED 30 JUNE 2025

During the quarter, Santa Fe Minerals Ltd ("**Santa Fe**", "**SFM**" or "**the Company**") continued work on the Watson's Well Vanadium project and the Challa Gold project.

Following the end of the quarter, the Company announced agreements to acquire the Eburnea Gold Project from Turaco Gold Limited (and its subsidiaries) (**Turaco Gold**, **TCG**) in Cote D'Ivoire – see ASX Announcement dated 3 July 2025. The acquisition is subject to various conditions precedent, including completion of a capital raising of at least \$1,000,000 and receipt of shareholder approval for the issue of consideration securities to TCG. Santa Fe will hold a General Meeting on 27 August 2025 – see Letter to Shareholders and Notice of Meeting released to ASX on 29 July 2025.

### CHALLA GOLD PROJECT (SFM 100%)

#### Golden Girls Prospect

#### Background

The Golden Girls area has been subject to extensive metal detecting for gold nuggets, and several phases of surface sampling with some very limited drill testing. Several drill intersections of anomalous gold (>100ppb Au) were identified with a maximum result of 3.74g/t Au (ASX Announcement 6<sup>th</sup> August 2018). No further drilling has been completed. Grid based Auger geochemical sampling has successfully extended the known gold anomalies and identified additional anomalies over a 5km strike with maximum results of 256ppb and 245ppb Au.

During the quarter, an additional 325 Auger samples were collected to better define the openended gold anomalies. Auger drilling was completed every 50m along 200m spaced lines adjacent to the previously identified anomalies (Figure 2). Assay results were received and processed following the end of the quarter. The Auger sampling successfully defined new gold anomalies both at the northern and southern ends of the previously identified 5km long gold trend (ASX Announcement 29 July 2025).

In addition, 4 lines of Auger samples completed 2km west of the Golden Girls prospect uncovered 3 new gold anomalies over 500m, 300m and 200m strike. This new area has now been named the "Golden Hope" prospect.

#### **Next Steps**

The Golden Girls Auger geochemistry targets are now sufficiently defined to be tested via an Aircore (AC) drilling program.

The new Auger geochemistry anomalies at the Golden Hope prospect are open along strike and will require additional sampling prior to AC drill testing.

## Watsons Well Vanadium – Titanium-Iron Project (SFM 100%)

## Background

The Watsons Well area hosts a 7km long high magnetic zone containing extensive vanadiumtitanium-iron mineralisation. The vanadium-titanium and iron mineralisation occur in massive to disseminated magnetite layers within the host gabbro and is easily traceable in magnetic survey data. A drilling program targeting the central thicker part of the 7km magnetic high zone intersected strong magnetite with associated robust vanadium-titanium and iron grades (ASX Announcement *3<sup>rd</sup> April 2023*). Multiple thick zones were intersected ranging up to 84m downhole. This thick zone in WWRC006 extended from 62m to 146m grading 0.4% V2O5, 4.24% TiO2, 20% Fe.

During the quarter, activities for Watsons Well were limited to desktop studies.

## Acquisition of the Eburnea Gold Project in Cote D'Ivoire

Following the end of the quarter, the Company announced agreements to acquire the Eburnea Gold Project from Turaco Gold in Cote D'Ivoire – see ASX Announcement dated 3 July 2025. The acquisition is subject to various conditions precedent, including completion of a capital raising of at least \$1,000,000 and receipt of shareholder approval for the issue of consideration securities to TCG.

Santa Fe has also received binding commitments to raise \$1,200,000 at \$0.05 per share (a 61.3% premium at the time to the last closing price) (**Capital Raising**). The issue of SFM shares under the Capital Raising is subject to shareholder approval.

Santa Fe will hold a General Meeting on 27 August 2025 to seek these shareholder approvals – see Letter to Shareholders and Notice of Meeting released to ASX on 29 July 2025.

The Eburnea Gold Project comprises of the Satama Permit and the Bouake North Application.

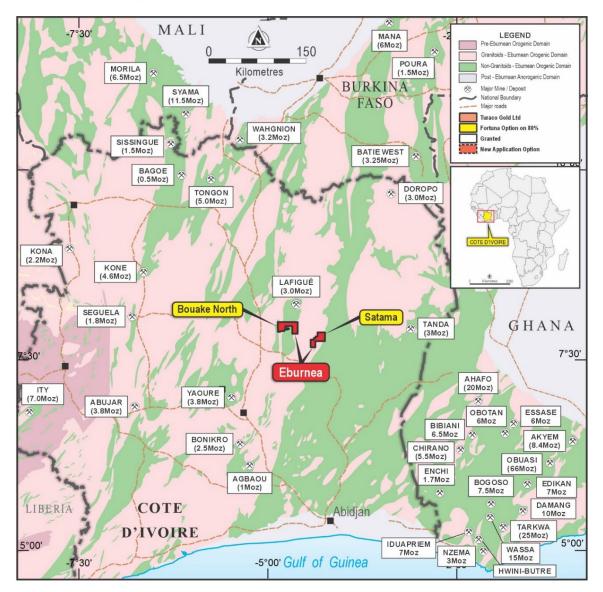

Figure 3: Eburnea Project location plan.

The Satama Permit (168.7km<sup>2</sup>) and Bouake North Application (380.8km<sup>2</sup>) have been explored for gold via soil and auger geochemistry, geophysics and several phases of Air Core (**AC**) and Reverse Circulation (**RC**) drilling. The drilling has identified multiple gold mineralised zones that have good potential to define significant resources with additional exploration.
