

RC Drilling Completed at Laverton Project – Assays Pending

Catalina Resources Ltd (ASX: CTN) ('Catalina' or the 'Company') is pleased to advise that Reverse Circulation (RC) drilling has been successfully completed at the Company's 100%-owned Laverton Project, located near the world-class Mt Weld Rare Earth Element (REE) Mine in Western Australia.

A total of 711 metres were drilled across five RC holes, targeting both gold and REE mineralisation. Samples have been submitted to the laboratory for analysis, with assay results for gold and Total Rare Earth Oxides (TREO) expected shortly.

Catalina's Laverton Project hosts a compelling dual-target opportunity comprising:

- A significant gold intercept from previous aircore drilling of 28m @ 1.09 g/t Au, and
- A nearby high-grade REE intersection of over 1% TREO from aircore drilling.¹

Planning is underway for a follow-up drilling program upon receipt and review of assay results.

Catalina is continuing to advance gold and REE targets at Laverton, leveraging its strategic location and previous exploration success.

This announcement has been authorised for release by the Executive Director.
