Riedel Resources Limited (ASX: RIE) (Riedel or the Company) is pleased to provide shareholders with its quarterly update on the Company's activities for the quarter ending 30 June 2025.

### OPERATIONS - Kingman Project, Arizona, USA

#### Project Planning & Development

Following the successful capital raising of ~\$1.4 million (before costs) initiated at the end of the quarter, Riedel Resources has advanced its planning activities at the Kingman Project. The majority of upcoming work will focus on the Tintic deposit, with an infill drilling program designed to generate the data required to support progression to the next phase of technical assessment. Additional exploration activities are also being planned across other parts of the project area to further evaluate broader prospectivity.

Material characterisation planning is underway, laying the groundwork for metallurgical test work. Project development planning is also progressing, including evaluation of permitting pathways under the current Federal Government framework.

With the gold price remaining above USD \$3,000 per ounce, the Company continues to assess opportunities for rapid project development

#### Regulatory & Compliance

The Company maintained compliance with all regulatory requirements, including ongoing reporting obligations and environmental monitoring commitments.

### **Toll treatment and process flowsheet**

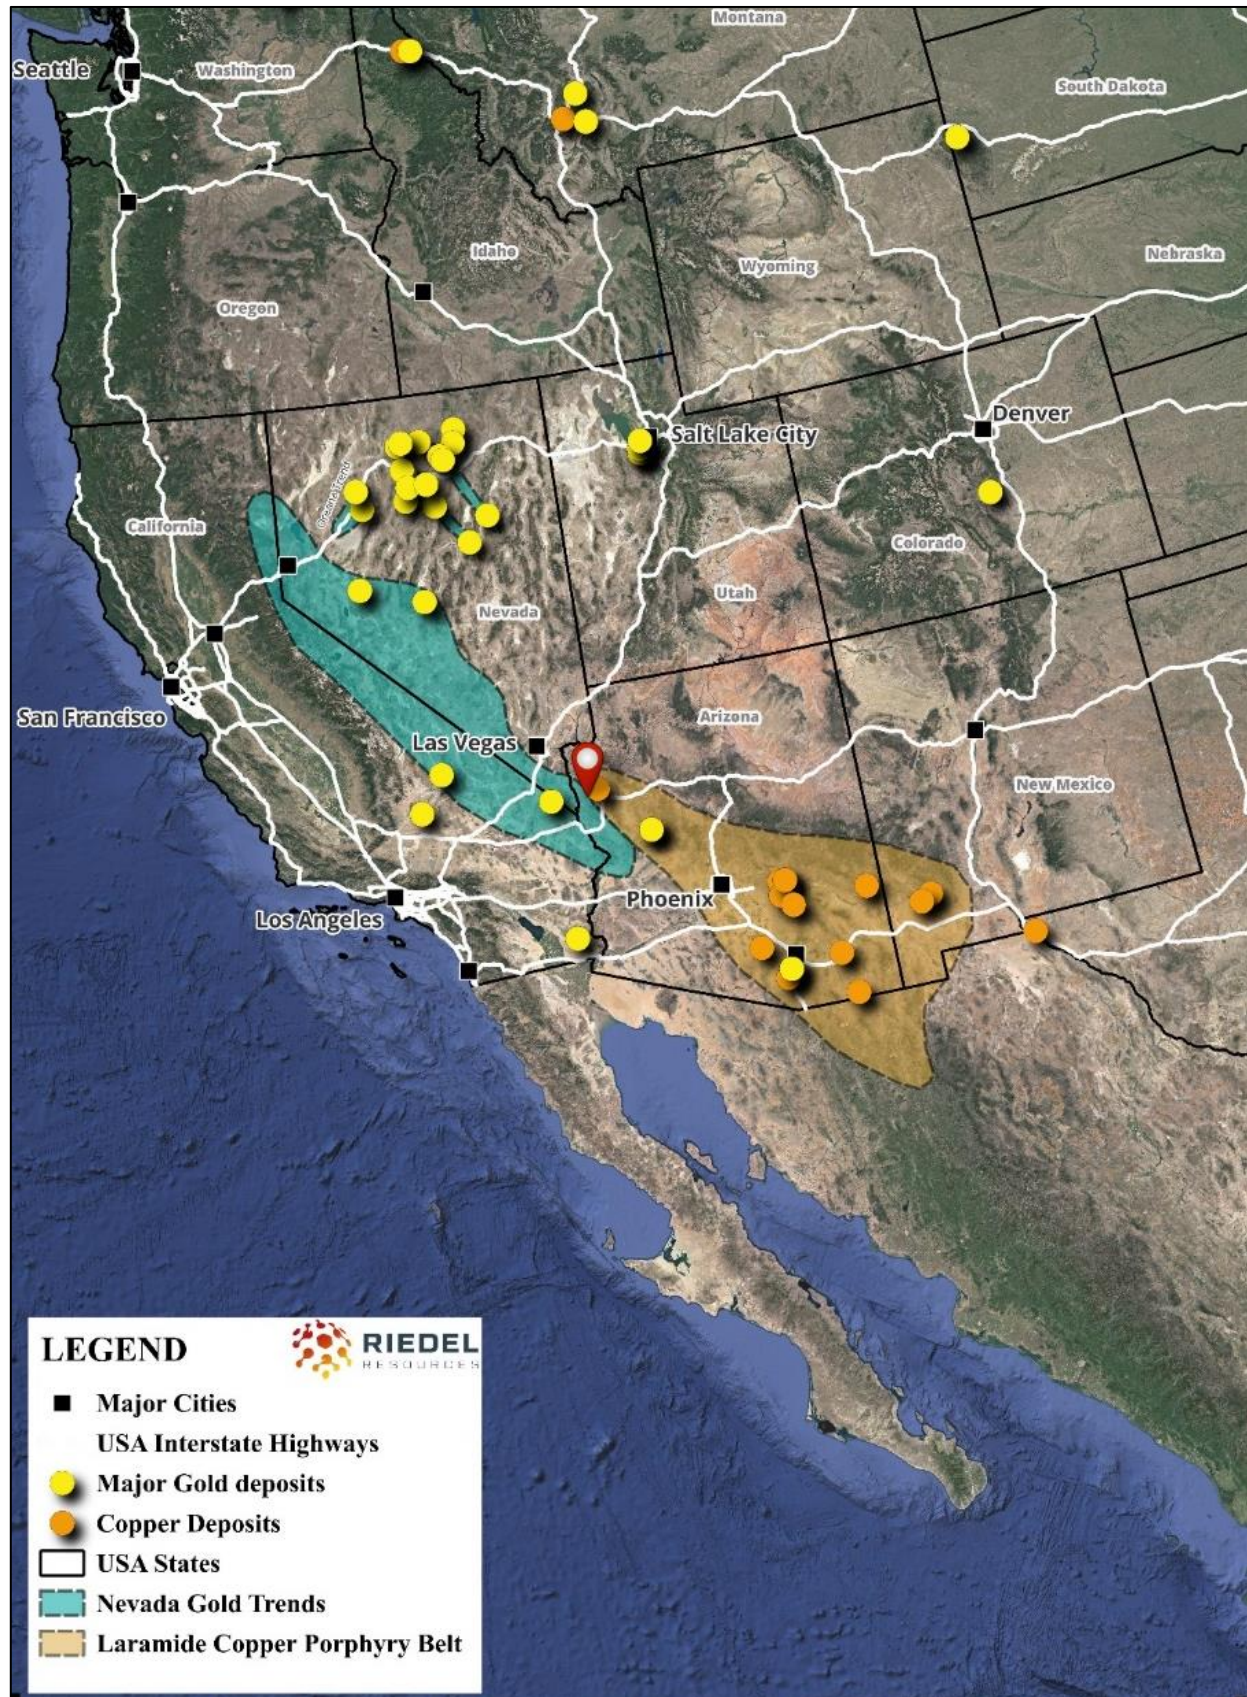

The Company continues to assess potential toll treatment options for the high grade Tintic deposit. The increase in commodity prices has seen a number of processing plants in the region advancing towards re-commencement of processing activities, potentially providing avenues for toll-treatment.

In addition to toll treatment opportunities, metallurgical studies will investigate the potential for a heap leach process for Tintic. These activities form part of broader material characterisation and process planning to ensure flexibility and optionality in future development scenarios.

The JORC Mineral Resource Estimate for the Tintic Deposit currently comprises 494,000t @ 4g/t Au, 43.9 g/t Ag, 0.8 % Pb, 0.5 % Zn for 64,000 ounces Au and 689,000 ounces Ag. The mineral resource is high-grade, shallow and outcropping and amenable to open pit mining techniques.

### **Kingman Project Background**

The Kingman Project is located in north-west Arizona, USA, approximately 90 minutes drive from downtown Las Vegas and within 5km of a major highway. The Kingman Project was mined predominantly for high-grade gold and silver from the 1880s until the early 1940s - which coincided with the outbreak of WWII.

## MARYMIA EAST GOLD & BASE METALS PROJECT, WA (RIE 11.93% diluting)

Norwest's 230km<sup>2</sup> Marymia East JV project (87%) is located just 10kms southeast of Norwest's Bulgera Gold project (100%) and just over 50kms east of the Plutonic Gold operation now owned and operated by Catalyst Metals. The Project is set within the Marymia Inlier, a discrete fault bounded Archean gneiss granitoid-greenstone domain surrounded by volcano-sedimentary basins which formed during the Paleoproterozoic Capricorn Orogen. Tenements E52/2394 and E52/2395 encapsulate the poorly exposed and structurally complex Baumgarten Greenstone Belt (BGB).

Norwest is finalising its drill plans to test recent and historical gold targets in and around the Baumgarten greenstone area located within its Marymia East project. The drilling is expected to follow on from the work currently being undertaken at Bulgera by Strike Drilling. Norwest will release details on the Marymia gold drilling program in due course.
