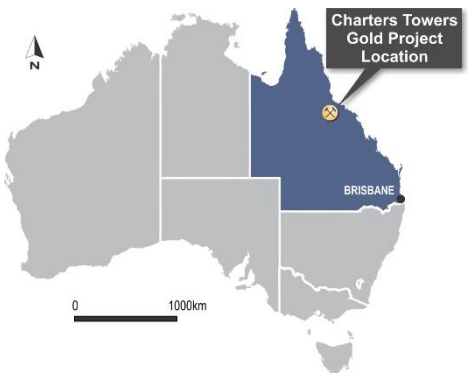
Quarterly Report

For the period ending 30 June 2025, dated 30 July 2025

ABOUT THE COMPANY

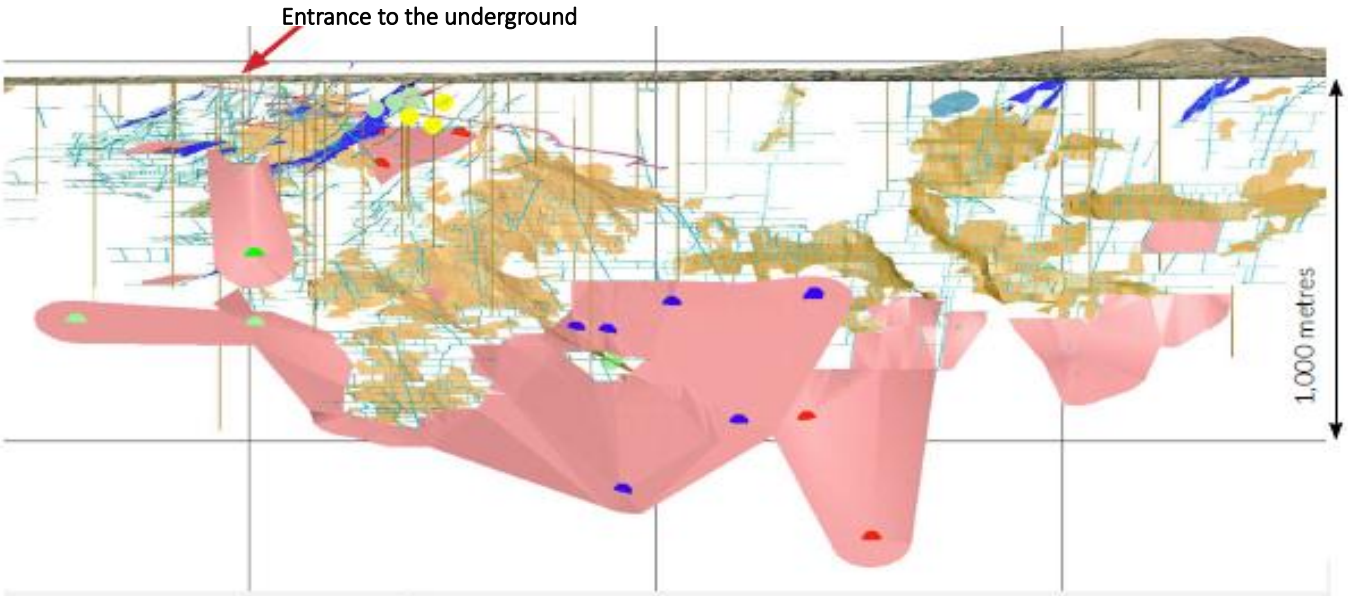
Citigold Corporation Limited (ASX:CTO) is an Australian gold exploration and development company located in northeast Australia. The Company's prime focus is the high-grade Charters Towers Gold Project. The Company continues to advance its core activities, including broad regional exploration programs, mine design, engineering, and working to restart its gold mine.



> Our aim is to be a 300,000 plus ounces per annum ultra-low-cost gold producer using state-of-the-art technologies and efficiencies, all with the aim of returning substantial profits to shareholders in harmony with the local environment[1].

Citigold holds 175 square kms of prospective exploration grounds surrounding the Central Mine mineralisation area and is actively exploring new reefs to further increase mineral resources over time.

[1] See ASX Announcement dated 11 February 2019, Updated December 2018 Quarterly Activities Report.



ABOVE TOP: Photo of Citigold's Central mine site and the entrance to the underground ramp portal.

ABOVE: Shows the gold areas to be mined in PINK and, the BROWN areas were previously mined.

GREY lines are 1 kilometer grid spacing, large gold deposit is in PINK and mining gold starts at relatively shallow 300 metres deep.

Long section looking south, showing the drill pierce points through the Central Area Indicated Mineral Resource structures. Above diagram, see ASX announcement dated 9 December 2020, Mineral Resources & Ore Reserves 2020 Report.

The above diagram is based on estimates of mineral resources. The material assumptions and technical parameters underpinning the estimates continue to apply and have not materially changed.

GEOLOGY AND EXPLORATION

Mineral resources and reserves are summarised below[1]:

CATEGORY	TONNES	GRADE	CUT-OFF	CONTAINED OUNCES
Inferred Mineral Resources*	32,000,000	14 g/t	3.0g/t	14,000,000
Indicated Mineral Resources (includes Probable Ore Reserves)	3,200,000	7.7 g/t	4.0 g/t	780,000
Probable Ore Reserves (derived from and contained within Indicated Mineral Resource)	2,500,000	7.7g/t	4.0 g/t	620,000

Citigold's Mineral Resources and Ore Reserves for the overall Gold Project are reported in accordance with the Australasian JORC Reporting Code 2012[1]. Mineral Resources and Ore Reserves remained unchanged during the Quarter. The material assumptions and technical parameters underpinning the estimates continue to apply and have not materially changed[1].

[1]See ASX Announcement dated 9 December 2020, Mineral Resources and Ore Reserves 2020.

Exploration

The Company's exploration program is aimed at identifying new reefs for future drilling and potentially increasing resources and reserves.

Exploration during the Quarter resumed after the Wet Season and focused on rock chip sampling over granite host rocks and vein systems eight kilometres to the southeast of Charters Towers city. A total of 58 two kilogram rock chip samples were taken and assayed for 35 elements by ICP-MS and gold by 50g fire assay at a NATA certified commercial laboratory in Townsville.

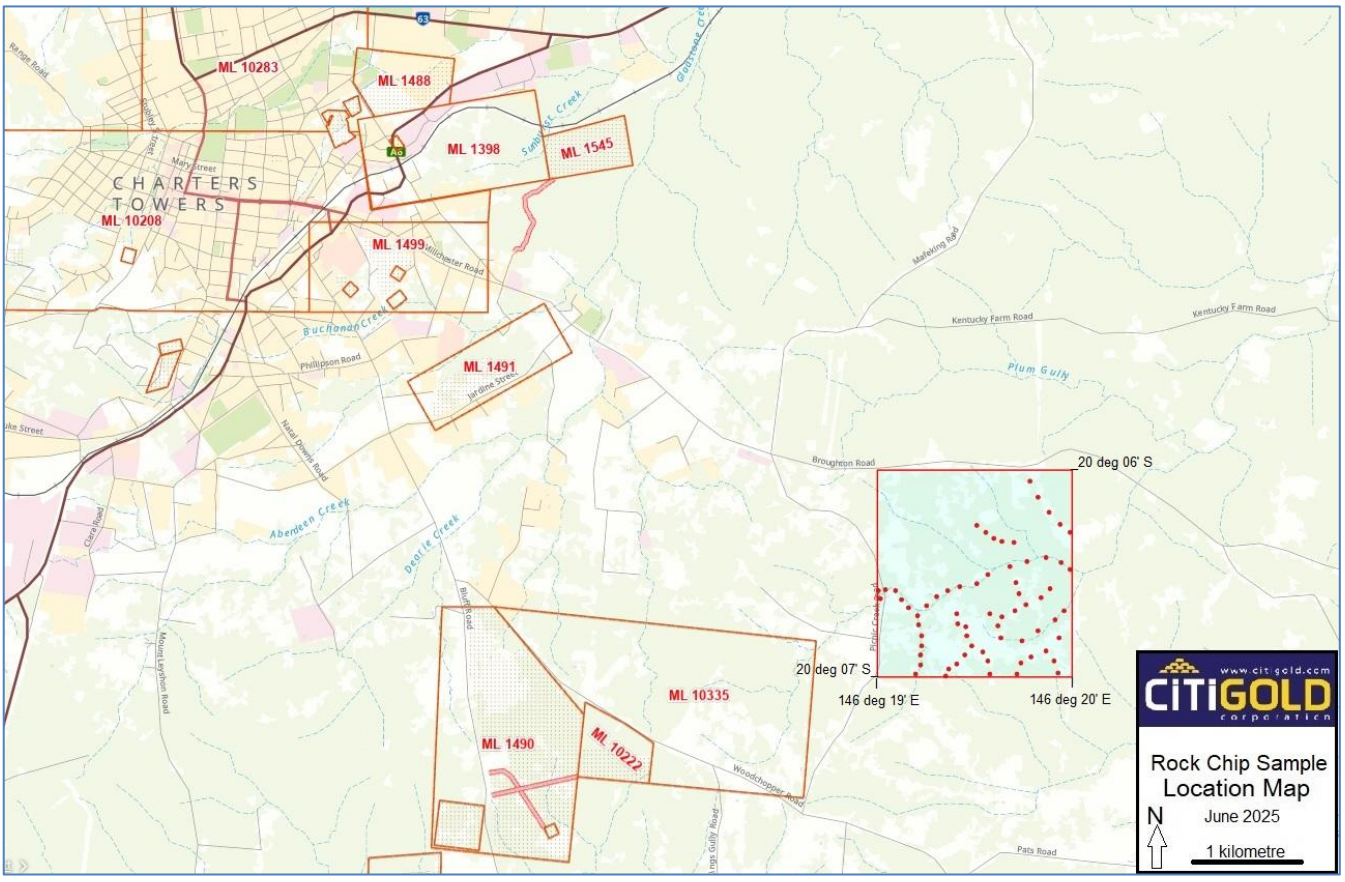


Figure 1. Rock chip sample locations for 58 samples taken 8km southeast of Charters Towers.

The results returned detectable gold in 14 samples, with only one anomalous sample assaying 0.21 g/t Au and one lower anomalous sample assaying 0.02 g/t Au. There were no anomalous base metal or critical mineral results.

The anomalous sample is hosted by the Sunburst Granodiorite, which is the host rock for major gold mineralization in Citigold's mining leases further to the northwest, and associated with a vein and dyke swarm (see Figure 2 below). This anomaly will be followed up.

Interpretation of the structural setting is continuing and major fracture systems associated with gravity and magnetic anomalies are being examined to determine potential sources of mineralization and additional mineralization.

The exploration program is ongoing on Citigold's five Exploration Permits and three Mineral Development Licences and results will be reported in due course.

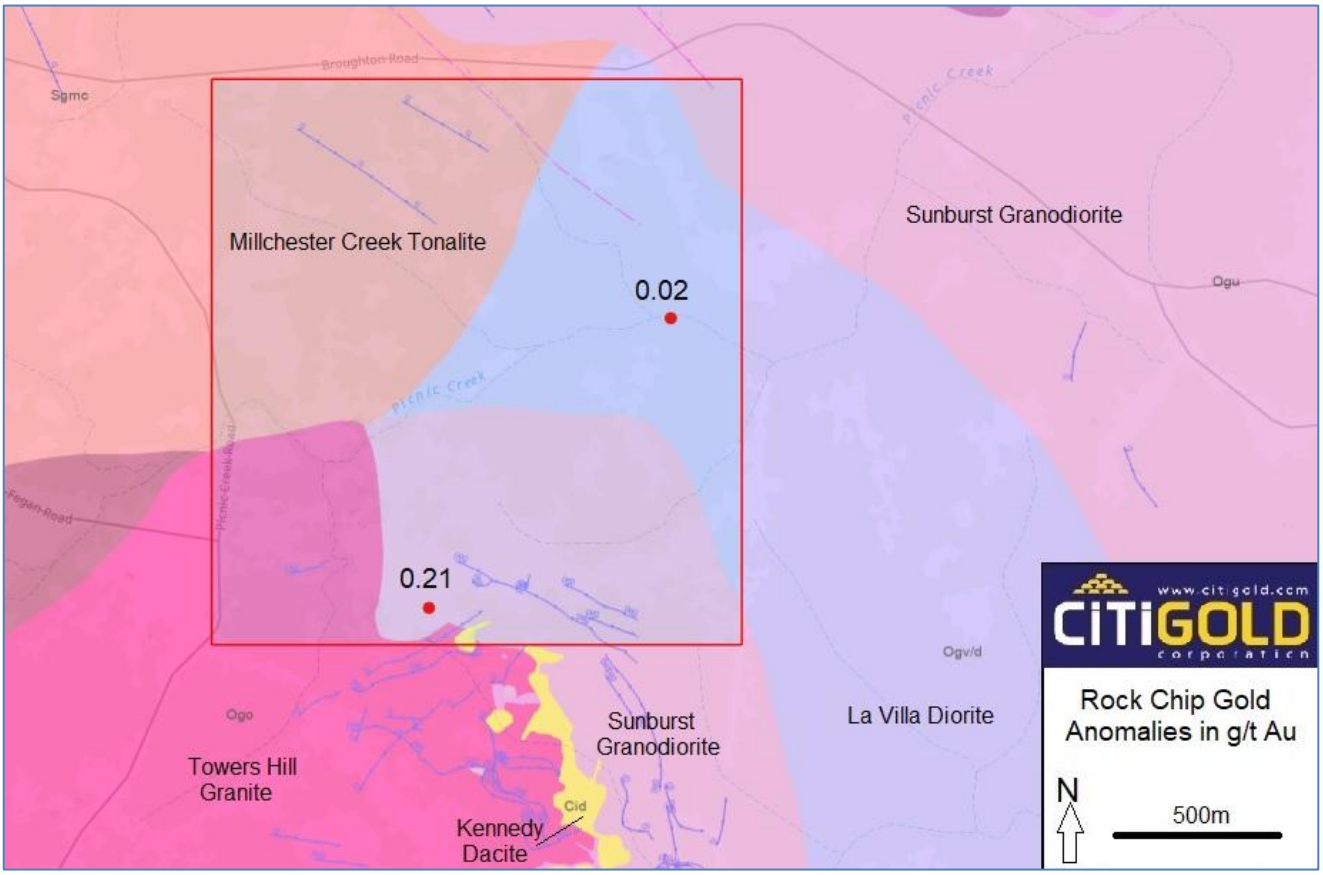

Figure 2. Only one anomalous sample was detected, hosted by the Sunburst Granodiorite and associated with a dyke swarm.

Exploration analysis, preparation of studies, reviews and maintenance of data, tenement optimisation, and other exploration activities continued. During the Quarter, no new exploration drilling was undertaken. Normal regulatory compliance reporting for exploration, mine and environmental continued during the Quarter.

MINE DESIGN AND ENGINEERING

Central Mine design and engineering continued to be optimised during the period. Other Central Mine design and engineering activities continued to progress including planning, scheduling, and optimisation reviews.

HEALTH, SAFETY, COMMUNITY AND ENVIRONMENT

There were no Lost Time Injuries, significant environmental, health, or safety issues during the quarter.

CORPORATE

Financial Discussion

Shareholders have funded the Company over many years. Management seeks to structure funding beneficial to the funder(s) and shareholders. There is interest by entities to join Citigold in the development of the gold mine. Citigold is continuing to work with parties who are at various stages of discussions regarding funding opportunities. The Company's mine sites continued to remain in care and maintenance.

The Company has in the past undertaken broad shareholder share purchase plans and share placements. The Company further has the ability to raise funds from the forward sale of gold in the ground and drawing on loan facilities as previously announced.

Appendix 5B Disclosures

The Company's accompanying Appendix 5B (Quarterly Cash Flow Report) includes amounts in items 6.1 & 6.2 which constitute directors' accrued fees and reimbursements during the Quarter.

During the period, the Company made a payment of $87,000 (capitalised), on exploration activities at its Charters Towers Gold Project, which included a regional exploration program, desktop studies, review of historical data, tenement optimisation and exploration technologies etc. Exploration payments totalling $49,000 (expense) included tenement management costs, mining rent and environmental fees etc. Development payments totalling $17,000 (capitalised) as reported in item 2.1(f) included mine design and engineering optimisation, scheduling, planning, reviewing data, and economic evaluation etc. Payment for administration and corporate costs amounted to $86,000 and included listing, compliance, consultants, administration, and project marketing activities etc.

The above activities were summarised in this quarterly report.

SUMMARY OF MINING TENEMENTS & AREAS OF INTEREST

The Consolidated Entity has a 100% control of the following mineral titles at Charters Towers as at 30 June 2025 and there were no acquisitions or disposals during the Quarter:

Exploration Permit Minerals	EPM 15964	EPM 15966	EPM 18465	EPM 18813	EPM 27287
Minerals Development Licenses		MDL 118	MDL 119	MDL 252	
Mining Leases	ML 1343	ML 1430	ML 1545	ML 10193	ML 10284
	ML 1344	ML 1472	ML 1585	ML 10196	ML 10335
	ML 1347	ML 1488	ML 10005	ML 10208	
	ML 1348	ML 1490	ML 10032	ML 10222	
	ML 1385	ML 1491	ML 10042	ML 10281	
	ML 1398	ML 1499	ML 10091	ML 10282	
	ML 1424	ML 1521	ML 10093	ML 10283

Authorised for release: by Mark Lynch, Chairman, Citigold Corporation Limited.

Cautionary Note: This release may contain forward-looking statements that are based upon management's expectations and beliefs in regards to future events. These statements are subject to risk and uncertainties that might be out of the control of Citigold Corporation Limited and may cause actual results to differ from the release. Citigold Corporation Limited takes no responsibility to make changes to these statements to reflect change of events or circumstances after the release. Images incorporated in this report are intended solely for illustrative purposes and the images may not precisely represent the current state of affairs.

Competent Person Statement: The following statements apply in respect of the information in this report that relates to Exploration Results, Mineral Resources and Ore Reserves: The information is based on, and accurately reflects, information compiled by team leader Mr Christopher Alan John Towsey, who is a Corporate Member and Fellow of the Australasian Institute of Mining and Metallurgy. Mr Towsey is a consultant and currently independent of Citigold Corporation Limited, having previously been a Director of the Company from 2014-June 2016. Input into the team for Ore Reserves is provided by Mr Garry Foord, a mining engineer and Fellow of the Australasian Institute of Mining and Metallurgy. Mr Foord was formerly the registered mine manager for the Charters Towers underground operations. Both have the relevant experience in relation to the mineralisation being reported on to qualify as a Competent Person as defined in the Joint Ore Reserves Committee (JORC) Australasian Code for Reporting of Exploration Results, Identified Mineral Resources and Ore Reserves 2012. Mr Towsey and Mr Foord have consented in writing to the inclusion in this report of the matters based on the information in the form and context in which it appears. **For full details see Technical Report on the Mineral Resources and Reserves at www.citigold.com click Mining >Technical Reports >Mineral Resources and Ore Reserves 2020.**

JORC CHECKLIST

SECTION 1 SAMPLING TECHNIQUES AND DATA

(Criteria in this section apply to all succeeding sections)

CRITERIA	JORC CODE EXPLANATION	COMMENTARY
Sampling techniques	Nature and quality of sampling (e.g. cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc.). These examples should not be taken as limiting the broad meaning of sampling. Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used. Aspects of the determination of mineralisation that are Material to the Public Report. In cases where 'industry standard' work has been done this would be relatively simple (e.g. 'reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fireassay'). In other cases more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (e.g. submarine nodules) may warrant disclosure of detailed information.	• At each site 1-2 kg of rock chips from either outcrop or creek-bed float were taken.
Drilling techniques	Drill type (e.g. core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc.) and details (e.g. core diameter, triple or standard tube, depth of diamond tails,face-sampling bit or other type, whether core is oriented and if so, by what method, etc.).	• No drilling was undertaken
Drill sample recovery	Method of recording and assessing core and chip sample recoveries and results assessed. Measures taken to maximise sample recovery and ensure representative nature of the samples. Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material.	• No drilling was undertaken
Logging	Whether core and chip samples have been geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies. Whether logging is qualitative or quantitative in nature. Core (or costean, channel, etc.) photo-graphy. The total length and percentage of the relevant intersections logged.	• Sample sites were photographed and locations determined from handheld GPS. • Field notes were taken at each site and any items of interest recorded.
Sub-sampling techniques and sample preparation	If core, whether cut or sawn and whether quarter, half or all core taken. If non-core, whether riffled, tube sampled, rotary split, etc. and whether sampled wet or dry. For all sample types, the nature, quality and appropriateness of the sample preparation technique. Quality control procedures adopted for all sub-sampling stages to maximise representivity of samples. Measures taken to ensure that the sampling is representative of the in situ material collected, including for instance results for field duplicate/second-half sampling. Whether sample sizes are appropriate to the grain size of the material being sampled.	• Samples were hand delivered to a commercial NATA accredited laboratory in Townsville where they are dried at 105°C; weighed; crushed to –6mm; and pulverised to 90% passing 75um where a 200g sub- sample is taken. 5% of samples are dual sub-sampled (second split) for sizing and analytical quality control purposes. Fire assay: 50g of sample is added to a combustion flux and fired at 1000°C; the resultant lead button is separated from the slag and muffled at 950°C to produce a gold/silver prill; the prill is digested in aqua regia and the liquid read on an AAS. ICP-AES: A 0.2g sub-sample is digested using nitric/hydrochloric/ perchloric/hydrofluoric acids; the diluted digestion product is then presented to a Perkin Elmer 7300 ICP AES for analysis. Quality Control: second splits (5% of total); 2in 45 sample repeats; and 2 CRM standards for each rack of 50 samples are analysed in all methods.

SECTION 1 SAMPLING TECHNIQUES AND DATA (CONT)

CRITERIA	JORC CODE EXPLANATION	COMMENTARY
Quality of assay data and laboratory tests	The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total. For geophysical tools, spectrometers, handheld XRF instruments, etc., the parameters used in determining the analysis including instrument make and model, reading times, calibrations factors applied and their derivation, etc. Nature of quality control procedures adopted (e.g. standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (i.e. lack of bias) and precision have been established.	• Citigold uses standards sourced from Gannett Holdings Pty Ltd, Perth, Australia. Certificate number 13U20C-22-04-13. • A blank sample and/or a standard sample and/or a duplicate sample are randomly inserted in approximately every 30 samples that are submitted. • NATA accredited laboratories in Townsville have their own rigorous 'in lab' QA/QC procedures and are accredited for precious metal and base metal analyses. • A complete discussion on assay techniques, sample sizes, assay variance and sample bias can be found in the Citigold 2020 Mineral Resources and Ore Reserves report at: http://www.citigold.com/mining/technical-reports
Verification of sampling and assaying	The verification of significant intersections by either independent or alternative company personnel. The use of twinned holes. Documentation of primary data, data entry procedures, data verification, data storage (physical and electronic) protocols. Discuss any adjustment to assay data.	• No check sampling is planned for this program with other laboratories. • The laboratory conducts its own QA/QC procedure and the results reported back to Citigold, and usually found to be acceptable. • Assay data is not adjusted prior to entry into the database. Repeat or duplicate assays are recorded in separate columns.
Location of data points	Accuracy and quality of surveys used to locate drill holes (collar and down-hole surveys), trenches, mine workings and other locations used in Mineral Resource estimation. Specification of the grid system used. Quality and adequacy of topographic control.	• Handheld GPS were used for sample locations and is accurate to within about 3 to 4 metres, sufficient for this type of surface sampling. • Site photographs were taken using a GPS enabled camera and coordinates cross-checked. • Coordinates were plotted using GDA 2020.
Data spacing and distribution	Data spacing for reporting of Exploration Results. Whether the data spacing and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource and Ore Reserve estimation procedure(s) and classifications applied. Whether sample compositing has been applied.	• Sample spacing was approximately one sample per 100m of traverse
Orientation of data in relation to geological structure	Whether the orientation of sampling achieves unbiased sampling of possible structures and the extent to which this is known, considering the deposit type. If the relationship between the drilling orientation and the orientation of key mineralised structures is considered to have introduced a sampling bias, this should be assessed and reported if material.	• Creek patterns tend to mirror the conjugate fracture set of regional stress fractures oriented roughly northwest-southeast and northeast-southwest. Intruded mineralization has been injected along the pre-existing fracture set in a series of crack-seal events. • Sampling along the creeks therefore will give a reasonable chance of sampling material shedding from lode systems that may also follow the pre-existing fracture set.
Sample security	The measures taken to ensure sample security.	• Samples were delivered by Citigold staff to the NATA accredited laboratory. • Standards are retained within the office of the chief geologist and only released under strict control. The chain of sample custody is managed and closely monitored by Citigold (management and senior staff).
Audits or reviews	The results of any audits or reviews of sampling techniques and data.	• A full Mineral Resources and Ore Reserves report was completed in May 2012, written in compliance with the then-current 2004 JORC Code. The report contains a comprehensive review and assessment of all sampling techniques and methodologies, sub-sampling techniques, data acquisition and storage, and reporting of results. Statements on QA and QC can be found on page 48 of the 2012 report. The report can be found on Citigold's website at: http://www.citigold.com/mining/technical-reports . • This 2012 report was audited by Snowden in 2012 and updated in December 2020 in accordance with the 2012 JORC Code with no change to the sampling technique or resource estimation methodology. • Citigold's database has been audited by several independent consultants since 1998 and most recently by Snowden in 2011. There have been no material changes to this report since Dec 2020.

SECTION 2 REPORTING OF EXPLORATION RESULTS

(Criteria listed in the preceding section also apply to this section)

CRITERIA	JORC CODE EXPLANATION	COMMENTARY
Mineral tenement and land tenure status	Type, reference name/number, location and ownership including agreements or material issues with third parties such as joint ventures, partnerships, overriding royalties, native title interests, historical sites, wilderness or national park and environmental settings. The security of the tenure held at the time of reporting along with any known impediments to obtaining a licence to operate in the area.	• Citigold holds a number of different types of mineral tenements including Exploration Permit Minerals (EPM's), Mineral Development Licenses (MDL') and Mining Leases (ML's). Citigold currently holds five (5) EPM's, three (3) MDL's and thirty (30) ML's:- EPM15964, EPM15966, EPM18465, EPM18813 & EPM27287 MDL118, MDL119, MDL252, ML1343, ML1344, ML1347, ML1348, ML1385, ML1398, ML1424, ML1430, ML1472, ML1488, ML1490, ML1491, ML1499, ML1521, ML1545, ML1585, ML10005, ML10032, ML10042, ML10091, ML10093, ML10193, ML10196, ML10208, ML10222, ML10281, ML10282, ML10283, ML10284, ML10335 Citigold holds current Environmental Authorities over the tenements, and has already produced over 100,000 ounces of gold. There are no known impediments to continuing operations in the area.
Exploration done by other parties	Deposit type, geological setting and style of mineralisation.	• Charters Towers is one of Australia's richest gold deposits that was discovered in 1871. A plethora of historical data from the Charters Towers area has been collected, collated and is included within the Citigold geological database. Previous exploration was summarised in the 2020 Mineral Resources and Reserves Report which can be found at: (http://www.citigold.com/mining/technical-reports). • Citigold's drill hole database includes historical drilling including: 1993 - Mt Leyshon Gold Mines Ltd extensions to CRA diamond drill holes in the areas. 1991 - Diamond and RC drilling by PosGold in a joint venture with Charters Towers Mines NL that covered parts of the Central area areas. 1981-84 - Diamond-drilling by the Homestake/BHP joint venture in the Central area. 1975, 1981-82, and 1987 - Diamond and RC drilling in central by A.O.G., CRA and Orion respectively. • Citigold retains all diamond core and a collection of core drilled by other companies is its on-site core-yard.
Geology	Deposit type, geological setting and style of mineralisation.	• Mineralisation at Charters Towers is referred to as "orogenic" style vein mesothermal gold deposit. See the 2020 Mineral Resources and Reserves Report which can be found at: http://www.citigold.com/mining/technical-reports • The many reefs are hosted within a series of variably-oriented fractures in granite and granodioritic host rocks. Mineralisation does occur in adjacent metasedimentary rocks but is more diffused and usually lower grade. • The gold-bearing reefs at Charters Towers are typically 0.3 metres to 1.5 meters thick, comprising hydrothermal quartz reefs in granite, tonalite and granodiorite host rocks. There are some 80 major reefs in and around Charters Towers city. • The majority of the ore mined in the past was concentrated within a set of fractures over 5 km long East-West, and 500 meters to 1600 meters down dip in a North-South direction. The mineralised reefs lie in two predominant directions dipping at moderate to shallow angles to the north (main production), and the cross-reefs, which dip to the ENE. • The reefs are hydrothermal quartz-gold systems with a gangue of pyrite, galena, sphalerite, carbonate, chlorite and clays. The reefs occur within sericitic hydrothermal alteration, historically known as "Formation". • The goldfield was first discovered in December 1871 and produced some 6.6 million ounces of gold from 6 million tons of ore from 1872 to 1920, with up to 40 companies operating many individual mining leases on the same ore bodies. There were 206 mining leases covering 127 mines working 80 lines of reef and 95 mills, cyaniding and chlorination plants. The field produced over 200,000 ounces per year for 20 consecutive years, and its largest production year was 1899 when it produced some 320,000 ounces.
Drill hole Information	A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes: easting and northing of the drill hole collar elevation or RL (Reduced Level – elevation above sea level in metres) of the drill hole collar dip and azimuth of the hole down hole length and interception depth hole length. If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the understanding of the report, the Competent Person should clearly explain why this is the case..	• No drilling was undertaken.
Data aggregation methods	In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (e.g. cutting of high grades) and cut-off grades are usually Material and should be stated. Where aggregate intercepts incorporate short lengths of high graderesults and longer lengths of low grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail. The assumptions used for any reporting of metal equivalent values should be clearly stated.	• No drilling was undertaken. • Stream sediment sampling reports anomalous samples with an explanation of the statistical method used to identify anomalies. • Assay results for Ag, Pb and Au are presented as ppm (equivalent to grams of metal per tonne of rock, written as g/t). In addition, Au (gold) when sampled over an interval such as a channel sample is presented as metal accumulations (grade x width),in metre-grams per tonne (m.g/t),particularly where intervals are less than one metre, to put the results into perspective as the minimum mining width is one metre. • No aggregation of sections has been used. • Metal equivalents are not used.

SECTION 2 REPORTING OF EXPLORATION RESULTS (CONT)

CRITERIA	JORC CODE EXPLANATION	COMMENTARY
Relationship between mineralisation widths and intercept lengths	These relationships are particularly important in the reporting of Exploration Results. If the geometry of the mineralisation with respect to the drill hole angle is known, its nature should be reported. If it is not known and only the down hole lengths are reported, there should be a clear statement to this effect (e.g. 'down hole length, true width not known').	• No drilling was undertaken.
Diagrams	Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported. These should include, but not be limited to a plan view of drill hole collar locations and appropriate sectional views.	Sample locations and anomalous ample sample location maps are presented in reports together with a table of latitude and longitude of anomalous samples.
Balanced reporting	Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades and/or widths should be practiced to avoid misleading reporting of Exploration Results.	• The proportion of samples regarded as anomalous is recorded in reports together with an explanation of the method used to determine anomalies. • Maps showing the locations of anomalous samples are provided in the report.
Other substantive exploration data	Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances.	• The Project has produced over 100,000 ounces of gold. Details such as bulk density, metallurgical characteristics, groundwater and geotechnical data are covered in the 2020 Mineral Resources and Ore Reserves Report which can be found at: http://www.citigold.com/mining/technical-reports .
Further work	The nature and scale of planned further work (e.g. tests for lateral extensions or depth extensions or large-scale step-out drilling). Diagrams clearly highlighting the areas of possible extensions, including the main geological interpretations and future drilling areas, provided this information is not commercially sensitive.	• Planned future work is detailed in the report.

The following statements apply in respect of the information in this report that relates to Exploration Targets and Exploration Results:

The information is based on, and accurately reflects, information compiled by Mr Christopher Alan John Towsey, who is a Corporate Member and Fellow of the Australasian Institute of Mining and Metallurgy. Mr Towsey is currently independent of Citigold Corporation Limited, having previously been an Executive Director of the Company from April 2014 to June 2016. He has the relevant experience in relation to the mineralisation being reported on to qualify as a Competent Person as defined in the Joint Ore Reserves Committee (JORC) Australasian Code for Reporting of Exploration Results, Identified Mineral Resources and Ore Reserves 2012. Mr Towsey has consented in writing to the inclusion in this report of the matters based on the information in the form and context in which it appears.

5.5	**Cash and cash equivalents at end of quarter (should equal item 4.6 above)**	**449**	**110**

6.	Payments to related parties of the entity and their associates	Current quarter $A'000
6.1	Aggregate amount of payments to related parties and their associates included in item 1	16
6.2	Aggregate amount of payments to related parties and their associates included in item 2	30

Note: if any amounts are shown in items 6.1 or 6.2, your quarterly activity report must include a description of, and an explanation for, such payments

7.	**Financing facilities** *Note: the term "facility' includes all forms of financing arrangements available to the entity.* *Add notes as necessary for an understanding of the sources of finance available to the entity.*	**Total facility amount at quarter end $A'000**	**Amount drawn at quarter end $A'000**
7.1	Loan facilities	5,100	4,357
7.2	Credit standby arrangements		
7.3	Other (please specify)		
7.4	**Total financing facilities**		

7.5	**Unused financing facilities available at quarter end**	743

7.6 Include in the box below a description of each facility above, including the lender, interest rate, maturity date and whether it is secured or unsecured. If any additional financing facilities have been entered into or are proposed to be entered into after quarter end, include a note providing details of those facilities as well.

Secured loan facility with PAL Group Pty Ltd ATF The I and F Trust was increased to $3.6 million, 12% per annum interest rate, with maturity extended to 31 July 2026 during the quarter and all other terms remained unchanged. Secured loan facility with The Rigby Superannuation Fund and Ross Neller and Rebecca Agius and Rollercoaster297 Pty Ltd ATF Neller Superannuation Fund and Luke Berthelsen and P&C Rigby Superannuation Fund and Francis Rigby is $1.5 million, 2.25% per month interest rate with maturity of 30 September 2025.

8.	**Estimated cash available for future operating activities**	**$A'000**
8.1	Net cash from / (used in) operating activities (item 1.9)	(227)
8.2	(Payments for exploration & evaluation classified as investing activities) (item 2.1(d))	(87)
8.3	Total relevant outgoings (item 8.1 + item 8.2)	(314)
8.4	Cash and cash equivalents at quarter end (item 4.6)	449
8.5	Unused finance facilities available at quarter end (item 7.5)	743
8.6	Total available funding (item 8.4 + item 8.5)	1,192
8.7	**Estimated quarters of funding available (item 8.6 divided by item 8.3)**	3.79

Note: if the entity has reported positive relevant outgoings (ie a net cash inflow) in item 8.3, answer item 8.7 as "N/A".

Otherwise, a figure for the estimated quarters of funding available must be included in item 8.7.

8.8 If item 8.7 is less than 2 quarters, please provide answers to the following questions:

8.8.1 Does the entity expect that it will continue to have the current level of net operating cash flows for the time being and, if not, why not?

Answer: N/a

8.8.2 Has the entity taken any steps, or does it propose to take any steps, to raise further cash to fund its operations and, if so, what are those steps and how likely does it believe that they will be successful?

Answer: N/a

8.8.3	Does the entity expect to be able to continue its operations and to meet its business objectives and, if so, on what basis?
Answer: N/A	
Note: where item 8.7 is less than 2 quarters, all of questions 8.8.1, 8.8.2 and 8.8.3 above must be answered.	

Compliance statement

1 This statement has been prepared in accordance with accounting standards and policies which comply with Listing Rule 19.11A.

2 This statement gives a true and fair view of the matters disclosed.

Date: 30 July 2025

Authorised by: Mark Lynch, Chairman
(Name of body or officer authorising release – see note 4)

Notes

1. This quarterly cash flow report and the accompanying activity report provide a basis for informing the market about the entity's activities for the past quarter, how they have been financed and the effect this has had on its cash position. An entity that wishes to disclose additional information over and above the minimum required under the Listing Rules is encouraged to do so.

2. If this quarterly cash flow report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report. If this quarterly cash flow report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.

3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.

4. If this report has been authorised for release to the market by your board of directors, you can insert here: "By the board". If it has been authorised for release to the market by a committee of your board of directors, you can insert here: "By the [*name of board committee – eg Audit and Risk Committee*]". If it has been authorised for release to the market by a disclosure committee, you can insert here: "By the Disclosure Committee".

5. If this report has been authorised for release to the market by your board of directors and you wish to hold yourself out as complying with recommendation 4.2 of the ASX Corporate Governance Council's *Corporate Governance Principles and Recommendations*, the board should have received a declaration from its CEO and CFO that, in their opinion, the financial records of the entity have been properly maintained, that this report complies with the appropriate accounting standards and gives a true and fair view of the cash flows of the entity, and that their opinion has been formed on the basis of a sound system of risk management and internal control which is operating effectively.
