

Unlocking Value - Developing Strategic Critical Mineral Projects in South Australia's Gawler Craton

Noosa Mining Conference: **Investor Presentation**

July 2025

ASX:LML

Disclaimer and Competent Person Statement

The information contained in this document ("Presentation") has been prepared by Lincoln Minerals Limited ("Company"). The purpose of this Presentation is to provide background information to assist readers in obtaining a general understanding of the Company's proposals and objectives. It is not and should not be considered as an offer or invitation to apply for or purchase any securities of the Company or as a recommendation or inducement to make an offer or invitation in respect of securities in the Company. No agreement to subscribe for securities will be entered into on the basis of this Presentation or any information contained in this Presentation.

The information in this Presentation is not intended to form the basis of any investment decision in relation to the Company or its assets and should not be considered as a recommendation to invest in the Company. This Presentation is not a prospectus, product disclosure document or other offering document under Australian law or under the law of another jurisdiction. Readers should carry out and should rely on their own independent review, investigation, analysis and due diligence of the Company and its operations, business and assets.

The information in this Presentation, which is selective and does not purport to contain all the information that readers may require to evaluate the Company, has not been independently verified. While the information contained herein has been prepared in good faith, neither the Company nor any of its shareholders, directors, officers, agents, employees or advisers give, have given or have authority to give, any representations or warranties (express or implied) as to, or in relation to, the accuracy, reliability or completeness of the information in this Presentation, or any revision thereof, or of any other written or oral information made or to be made available to any interested party or its advisers (all such information being referred to as "Information") and liability therefore is expressly disclaimed. Accordingly, neither the Company nor its directors, officers, agents, employees or advisers take any responsibility for, or will accept any liability whether direct or indirect, express or implied, contractual, tortious, statutory or otherwise, in respect of, the accuracy or completeness of the Information or for any of the opinions contained herein or for any errors, omissions or misstatements or for any loss, howsoever arising, from the use of this Presentation.

This Presentation should not be considered as the giving of investment advice by the Company or its directors, officers, agents, employees or advisers. Each party to whom this Presentation is made available must make its own independent assessment of the Company after making such investigations and taking such advice as may be deemed necessary. In particular, any estimates or projections or opinions contained herein necessarily involve significant elements of subjective judgment, analysis and assumptions and each recipient should satisfy itself in relation to such matters.

This Presentation includes certain statements that may be deemed "forward-looking statements". All statements in this discussion, other than statements of historical facts, that address future activities and events or developments that the Company expects, are forward-looking statements. Although the Company believes the expectations expressed in such forward-looking statements are based on reasonable assumptions, such statements are not guarantees of future performance and actual results or developments may differ materially from those in the forward-looking

future performance and actual results or developments may differ materially from those in the forward-looking statements. Factors that could cause actual results to differ materially from those in forward-looking statements include market prices, continued availability of capital and financing, and general economic, market or business conditions. Investors are cautioned that any such statements are not guarantees of future performance and that actual results or developments may differ materially from those projected in forward-looking statements.

The information in this document that relates to Exploration Results and Mineral Resources is based upon information compiled by Mr Shane O'Connell who is a Member of the Australasian Institute of Mining and Metallurgy. Mr O'Connell is a consultant and advisor to Lincoln Minerals Limited and has sufficient experience relevant to the style of mineralisation, the type of deposit under consideration and to the activity undertaken to qualify as a Competent Person as defined in the 2012 edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (the JORC Code). Mr O'Connell consents to the release of the information compiled in this report in the form and context in which it appears.

Information extracted from previously published reports identified in this report is available to view on the company's website www.lincolnminerals.com.au or by searching ASX's announcements. The pre-2012 information was prepared and first disclosed under the JORC Code 2004. It has not been updated since to comply with the JORC Code 2012 on the basis that the information has not materially changed since it was last reported. The company confirms that it is not aware of any new information or data that materially affects the information included in the original market announcements, and in the case of resource estimates of mineral resources, that all material assumptions and technical parameters underpinning the estimates in the relevant market announcements continue to apply and have not materially changed.

The Board has authorised the release of these presentation materials.

Diversified Critical Minerals Portfolio: Four Key Commodities - Three Advanced Projects

| | | |
|---|---|--|
| Copper/Zinc Minbrie Project | Exploration Discovery Hole¹ 29.5m @ 0.8% Cu, 7.5% Pb, 1.9% Zn, 9.0 g/t Ag | <ul style="list-style-type: none"> • Located in South Australia's Gawler Craton: Potential for large-scale copper and base metal mineralisation. • Multiple sulphide-bearing zones, 7km of strike², confirmed Cu-Pb-Zn intersections • Approvals to drill are underway. Anticipated to be approved within 2 months • Further drill targeting underway in Northern Zone. |
| Graphite Kookaburra Graphite Project | 12.8Mt @ 7.6% TGC Resource³ | <ul style="list-style-type: none"> • Positioned for "first mover advantage" with an existing Mining Lease • Updated PFS⁴ 2024 • Pre-tax⁴: IRR of 41%; NPV₁₀ of A\$114m (US\$77m); Start-up capital A\$29m • Progression of downstream partnering and evaluation of strategic options |
| High Purity Iron Green Iron Project | 1.2 Bt @ 26% Fe Resource⁵ (easy upgrade to >67% Fe) | <ul style="list-style-type: none"> • SA's best undeveloped High-Purity Iron asset by grade, size and proximity to major Infrastructure • Partnering process aiming to complete DFS and approvals⁷ • Involved in SA Government Green Steel Strategy |
| Uranium Eyre Uranium Portfolio | Exploration Historic uranium drill intercepts⁸ up to 570 ppm U | <ul style="list-style-type: none"> • Validating the Eyre Peninsula as an emerging uranium province • Three defined targets and generating new targets • Near advanced development projects in similar geological settings |

¹ LML ASX announcement dated 12 February 2025, titled "Mineralised Zones Identify Copper & Base Metals Potential". ² LML ASX announcement 17 February 2025 "Lincoln confirms mineralised system with multiple sulphide zones over 7km of strike at Minbrie, SA." ³ LML ASX announcement dated 16 April 2024 titled "Update to Target Achieved of Doubling the Kookaburra Graphite Project Resource". For a breakdown of Mineral Resources by category, see Appendix slide. ⁴ LML ASX announcement dated 28 October 2024, titled "Kookaburra Graphite Project PFS progresses Lincoln's aim to be Australia's Next Graphite Producer". The Company confirms that all the material assumptions underpinning the production target and the forecast financial information derived from the production target, in the announcement continue to apply and have not materially changed. ⁵ Centrex Metals ASX announcement dated 18 Sep 2015 titled "Eyre Iron Joint Venture Resource Update" and LML ASX announcement dated 7 June 2012 entitled "New Gum Flat Iron Ore Resource". The information was prepared and first disclosed under the JORC Code 2004. It has not been updated since to comply with the JORC Code 2012 on the basis that the information has not materially changed since it was last reported. For a breakdown of Mineral Resources by category, see Appendix slide. ⁶ Mine and Port Scoping Study Completed and DFS Commenced (Centrex ASX release 3 May 2012). ⁷ Scoping Studies and Prefeasibility Studies undertaken by Centrex Metals. For one of many references see "Drilling Commences at Fusion - Expanded PFS Underway" (Centrex ASX release 13 December 2013). ⁸ LML ASX announcement dated 9 April 2024 titled "Historic uranium drill intercept up to 570 ppm".

South Australia's Gawler Craton – A Tier-1 Critical Minerals Jurisdiction

- Gawler Craton highly ranked for global mining investment and strong trade agreements.
- Stable political environment, proximity to Asia, the Middle East, and North Africa.

Copper

- South Australia hosts about **10%**⁵ of the **world's copper** reserves and **69%**⁶ of **Australia's copper** resources.

Uranium

- South Australia is to **uranium** what Saudi Arabia is to **oil**.
- South Australia hosts over 23% of global uranium resources and five of Australia's permitted uranium mines.

Graphite

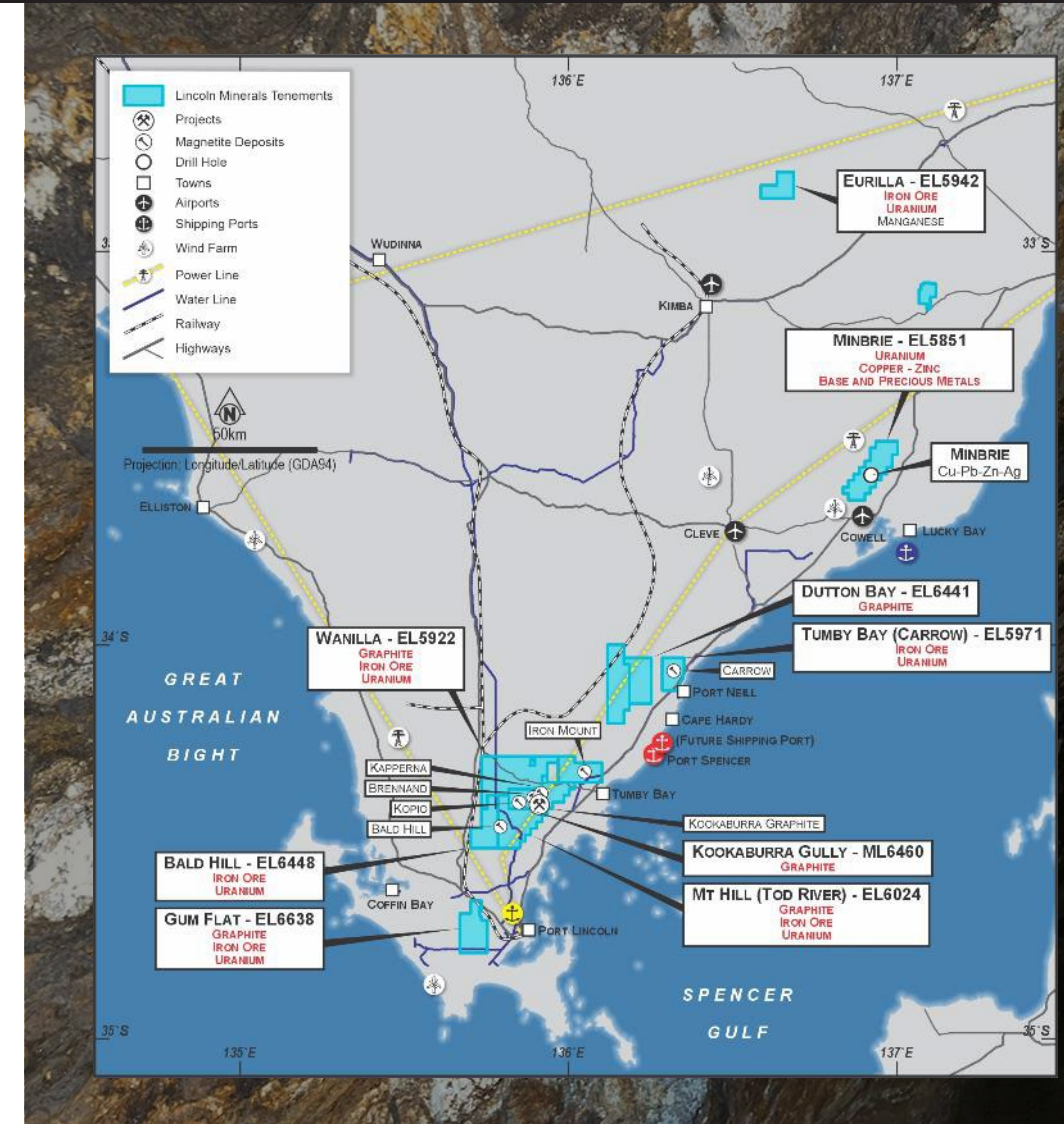

- South Australia has **the largest share** (66%) of Australia's confirmed graphite reserves.¹
- Potential for SA to emerge as Australia's pre-eminent graphite region.
- Kookaburra Graphite Project is included in Austrade's 2025 Australian Critical Minerals Prospectus.

High Purity Iron (Magnetite)

- More than **18 billion tonnes of magnetite** resources in South Australia.³
- Region hosts ~43% of Australia's identified magnetite resources.⁴

Source: ¹ Graphite - Energy & Mining. ² World Nuclear Association. ^{3 & 4} Source: South Australia's GSSA's Magnetite South Australia study. See <https://www.energymining.sa.gov.au/industry/geological-survey/gssa-projects/magnetite-south-australia>. ^{5 & 6} Geoscience Australia 2022.

⁷SA Premier Department - new-target-for-renewables

Favourable Jurisdiction and Infrastructure

- All projects located within 5–35km of grid power and towns.
- Port, power, water and road access in place supporting faster and cheaper project development.
- Multiple port options available, including Port Lincoln and approved-but-unbuilt Cape Hardy Port.
- De-salination plant at Port Lincoln under construction, supporting future processing needs.
- Existing access to renewable-backed electricity aligns with green material credentials.

Lower project capital costs due to proximity of infrastructure

| Project | Power (km) | Mains Water ² (km) | Local Town (km) | Regional Town & Airport (km) | Preferred Port (km) |
|----------------------|------------|-------------------------------|-----------------|------------------------------|---------------------|
| Kookaburra Graphite | 5 | 15 | 30 | 30 | 30 |
| Green Iron HPI – DRI | 5 | 20 | 35 | 35 | 35 |
| Carrow HPI-DRI | 10 | 5 | 5 | 80 | 10 ³ |
| Minbrie Copper-Zinc | 20 | 15 | 10 | 90 | 25 |

1. SA Premier Department - new-target-for-renewables
2. SA Water Port Lincoln De-salination plant construction is planned for completion 2026. Stage 1 4GI with capacity to expand to 8GI.
3. Cape Hardy Port is approved but not constructed.

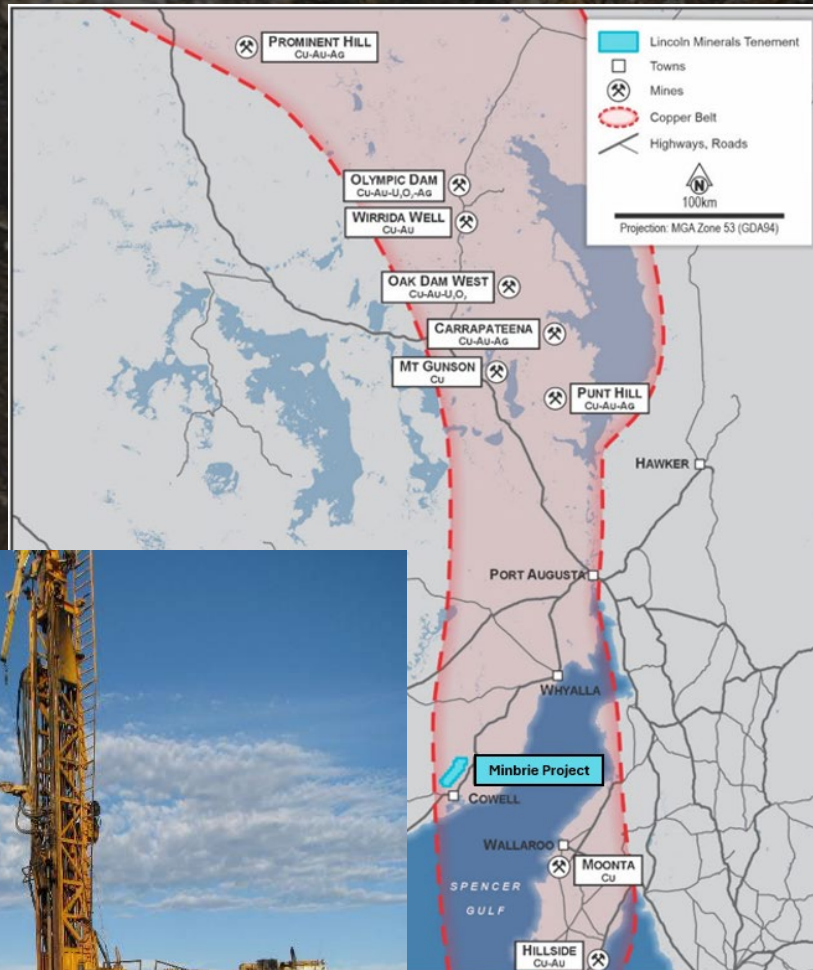

Copper back on the rise

- **Essential metal** for EVs, renewables, grids & data centres
- **Structural supply gap:** demand rising, ore grades declining, new mines delayed
- **Demand increasing,** IEA forecasts refined copper demand to grow from 27Mt (2024) to 33Mt by 2035
- **Supply shortfall:** IEA forecast up to 30% gap by 2035 without major new capacity
- **Prices near record highs:** ~\$9.9k/t forecast for H2 2025, with Goldman Sachs and Citibank forecasting further gains.
- **Geopolitical support:** classified critical mineral in US & EU.
- **Investor opportunity:** exploration companies (like Lincoln) stand to benefit from drilling & discovery upside

Minbrie Copper-Base Metals Project – Confirming Scale Across Untested Zones

ASX:LML

Minbrie Discovery – Previously Overlooked

Reinterpreting legacy data – Minbrie breakthrough

BUDD192¹: A fortuitous discovery reignites Minbrie

29.5m @ 0.8% copper (Cu), 7.5% lead (Pb), 1.9% zinc (Zn), 9.0 g/t silver (Ag) from 131.1m including:

- 12m @ 1.3% Cu, 12.4% Pb, 2.0% Zn, and 13.2 g/t Ag from 139m.
- 1m @ 4.8% Cu, 31% Pb, 3.1% Zn, and 36 g/t Ag from 145m.
- 3m @ 1.7% Cu, 19.4% Pb, 2.0% Zn, and 17.0 g/t Ag from 156m.

- In 2011, Centrex drilled 262 holes targeting magnetite; rights to other metals remained with Lincoln.
- BUDD192 was unintentionally extended after visible sulphides excited the drill team, uncovering significant Cu-Pb-Zn mineralisation.
- Centrex focused only on iron; whereas Lincoln initially focused on graphite and magnetite projects, leaving discovery untested.
- Lincoln's recent reinterpretation shows that most holes missed the key mineralised formation

Drilling Planned in Northern Section

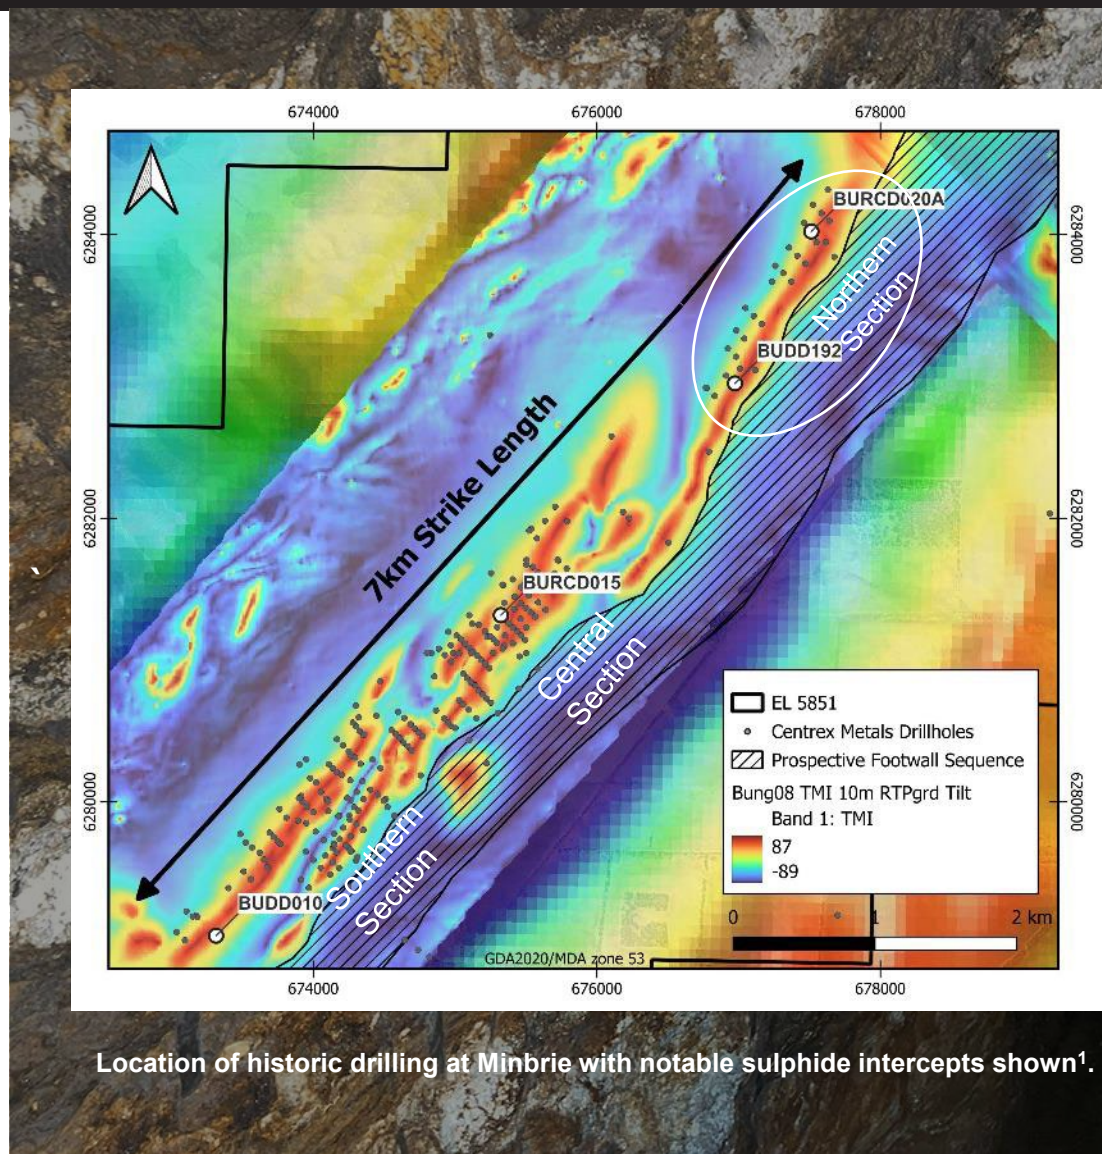

Two target areas selected for initial testing

Immediate targets focused around the “discovery hole” BUDD192

- Testing up dip and down dip and along strike between Magnetite BIF Footwall & Mylonite Shear Zone
- Testing for an oxide and/or a supergene zone
- Drill targets selected and approvals underway

Advanced structural target around BURCD020A

- Testing E–W fault intersections with Kalinjala & Mylonitic Shear Zones
- Drill targets are being finalised and approvals underway

Location of historic drilling at Minbrie with notable sulphide intercepts shown¹.

Strategic Drill Program – Trap Zone Targeting

Three priority trap zones identified*:

- **Trap Zone 1:**
Between magnetite BIF footwall & Mylonite Shear Zone, within reactive Katunga Dolomite Lithologies. Around *BUDD192*¹: 29.5m @ 0.8% Cu, 7.5% Pb, 1.9% Zn, 9.0 g/t Ag from 131.1m
- **Trap Zone 2:**
At groundwater/weathering boundaries – potential base metal oxides and/or supergene enrichment.
- **Trap Zone 3:**
Intersection of Kalinjala Shear Zone - Mylonite Shear Zone, and Regional East-West faults around BURCD020A

*This figure is a **conceptual representation** of the region based on geological interpretation and available data. It includes inferred features and should not be taken as a literal depiction of subsurface geology.

¹ LML ASX announcement dated 12 February 2025, titled “Mineralised Zones Identify Copper & Base Metals Potential”.

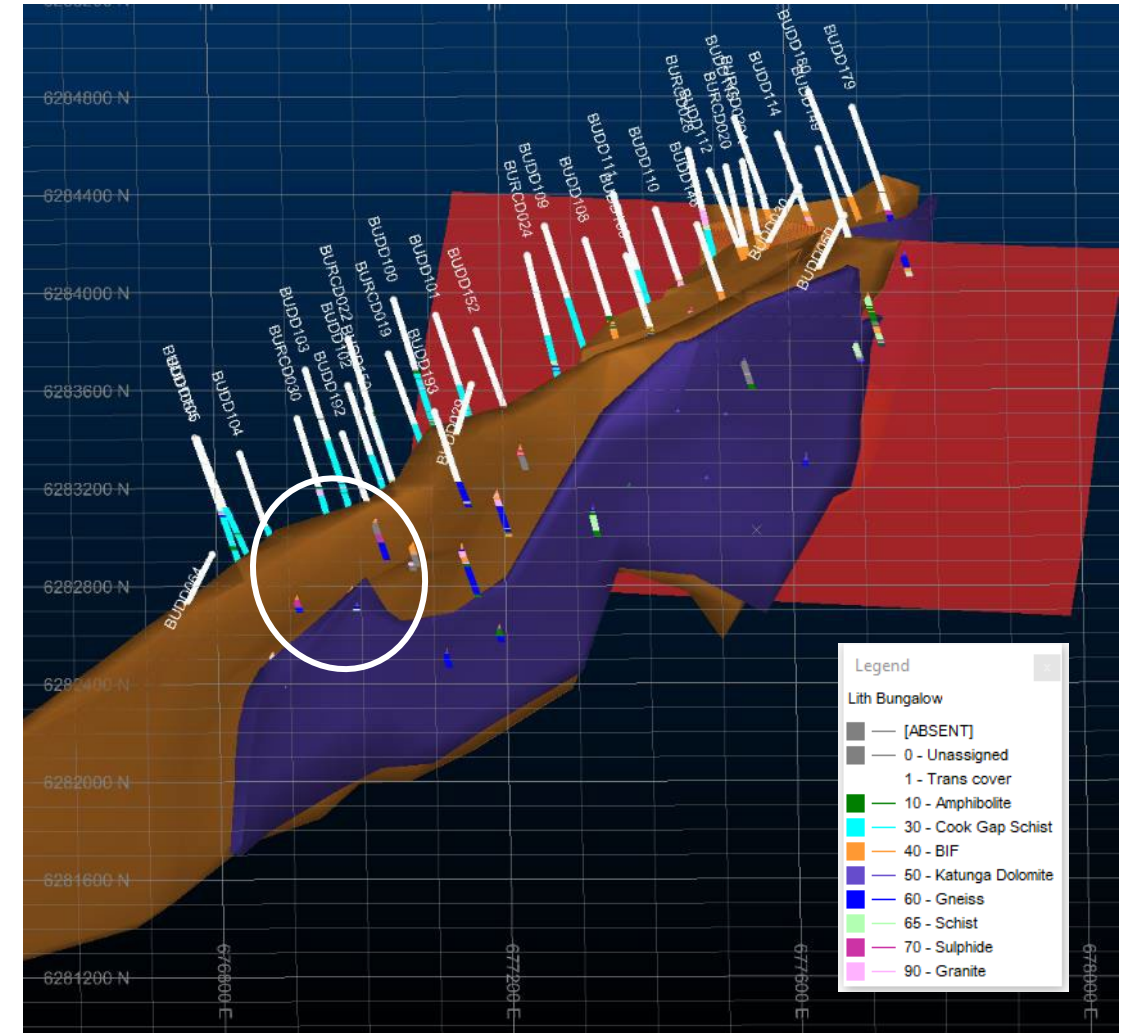

From Simple Cross Sections to a Complex 3D Model

Original interpretation¹ before re-logging and re-assay program (February 2025).

New modelling² revealing the complexity of the target zone which is de-risking upcoming drilling (June 2025)

¹ LML ASX announcement dated 12 February 2025, titled "Mineralised Zones Identify Copper & Base Metals Potential".

² LML ASX announcement dated 8 July 2025, titled "Minbie Copper-Base Metals Priority Drill Targets Confirmed"

Drilling Area - Targeting Trap Zone 1 & 2

BUDD192¹ is 29.5m @ 0.8% copper (Cu), 7.5% lead (Pb), 1.9% zinc (Zn), 9.0 g/t silver (Ag) from 131.1m

BURCD030 shows a correlation with BUDD192, terminating just metres from expected mineralisation, pXRF showing copper bornite vein at 274m (up to pXRF 3.03% Cu)².

Portable XRF readings are not a replacement for comprehensive laboratory analysis and only reflect elemental concentration at specific points, rather than the entire rock. While they assist in geological interpretation, verifying metal presence and selecting which samples should undergo full laboratory analysis, they offer only an approximate concentration.

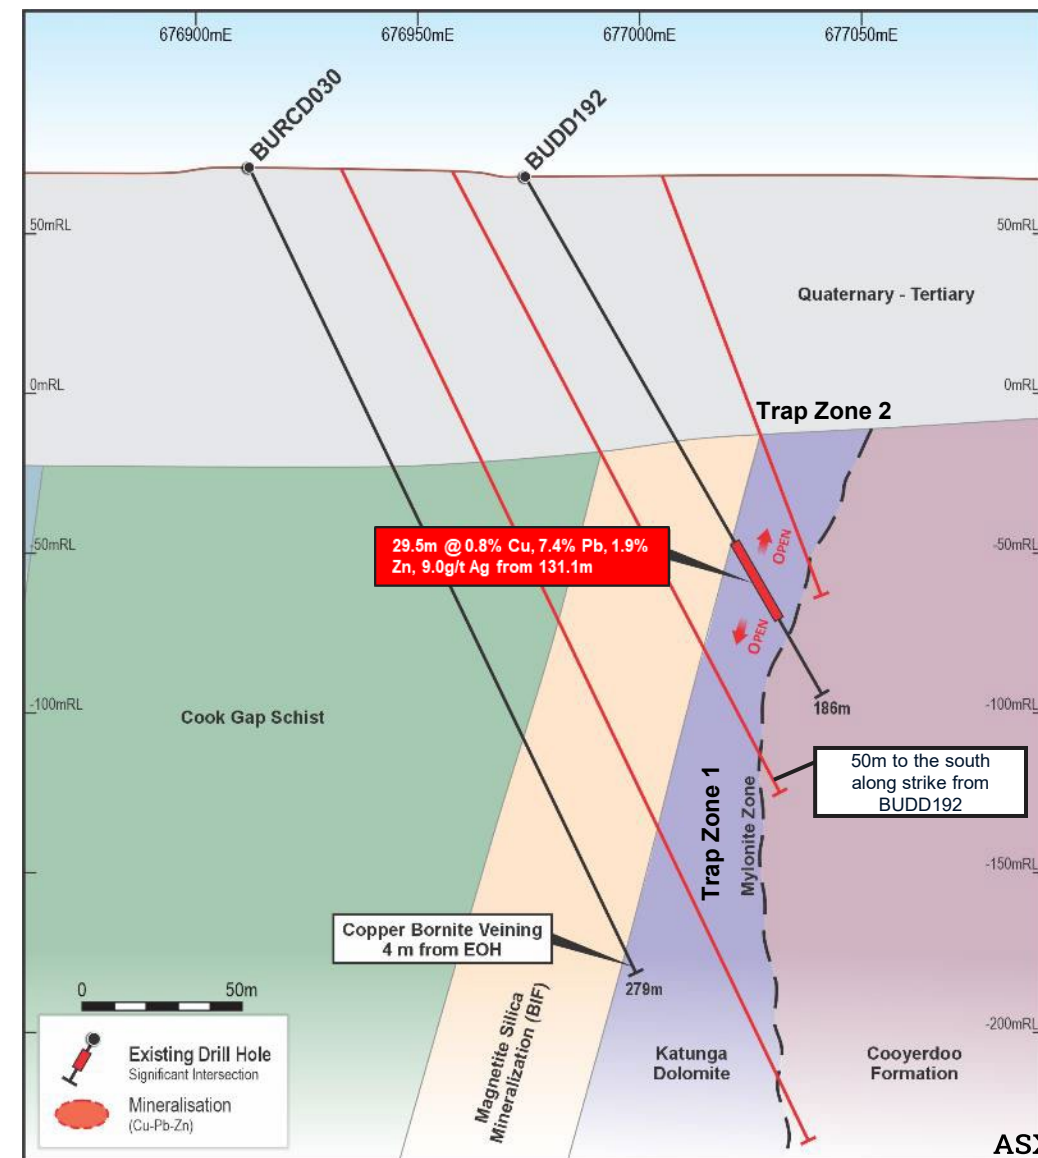

Planned Objectives:

Testing using RC with a Diamond Drill tail:

- Along strike and up dip near BUDD192 for orientation and metallurgical testing
- Extension and up dip of BURCD030 to define vertical continuity and grade distribution
- Testing extension along strike.
- Oxide / supergene - Targeting shallow mineralisation potential. The weathered profile around BUDD192 remains untested.

¹ LML ASX announcement dated 12 February 2025, titled "Mineralised Zones Identify Copper & Base Metals Potential".

² LML ASX announcement dated 2 June 2025, titled "Priority copper base metal target at Minbrie (updated)."

High Priority Area Along Major Cross-Cutting Structure

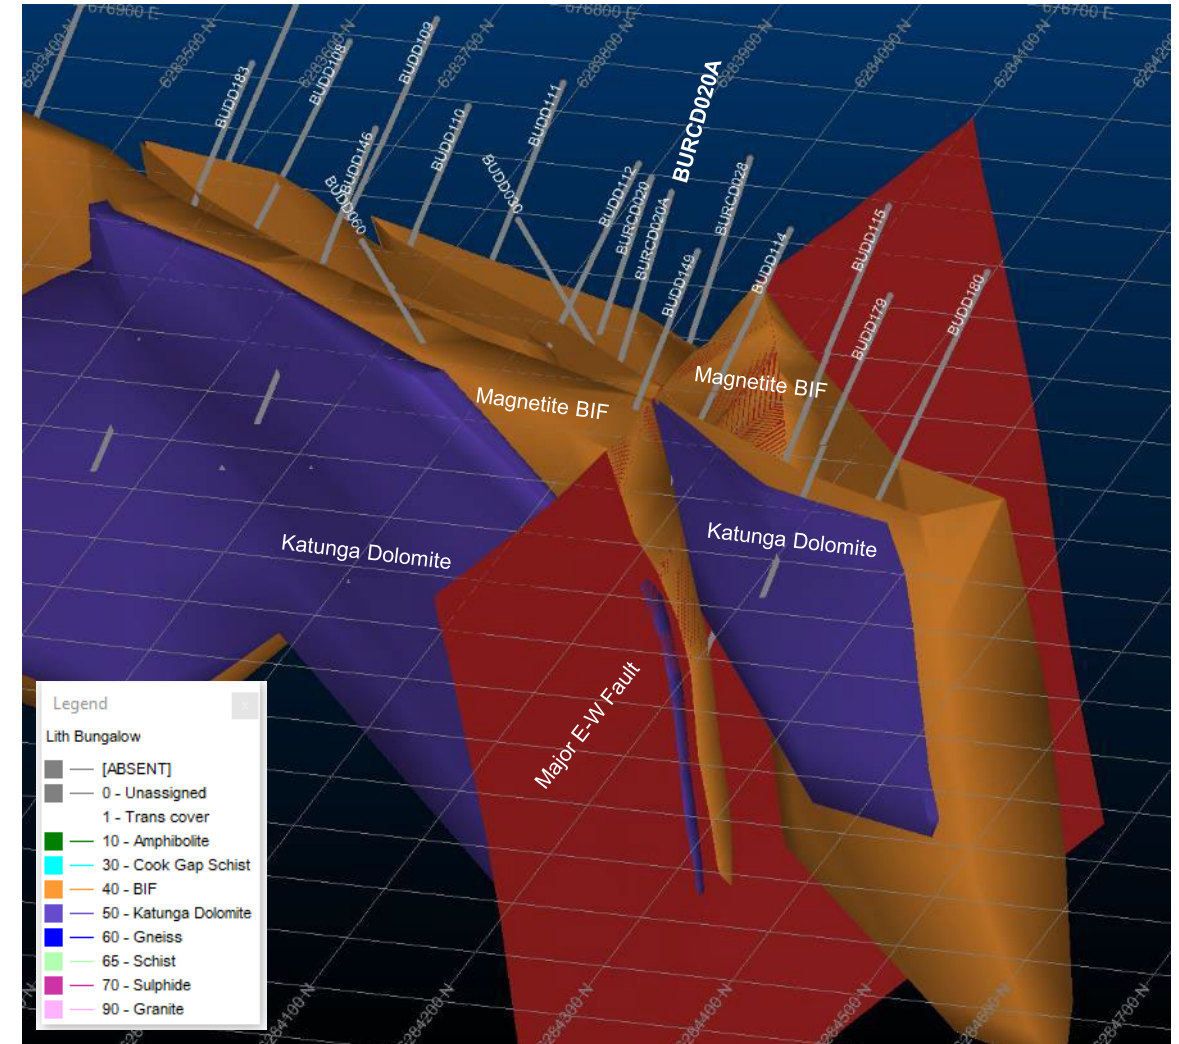

- **Drill holes still being designed around footwall mineralised intercept BURCD020A¹:**

Key Insights

- Identified **dilation zone** linked to regional Intersection of Kalinjala Shear Zone - Mylonite Shear Zone, and Regional East–West Faults
- Faults show **multiple reactivation events** under a **transpressional regime** - enhancing **permeability** and forming **fluid traps**. **East–West faults** intersect **Hiltaba Suite granites** and **Kalinjala Shear Zone**, is mantle tapping.

¹MLM ASX announcement 17 February 2025 "Lincoln confirms mineralised system with multiple sulphide zones over 7km of strike at Minbrie, SA."

For hole details depicted in image, see LML ASX announcement dated 8 July 2025, titled “Minbrie Copper-Base Metals Priority Drill Targets Confirmed”

Next Steps

Drill Ready early Q4 CY2025

1. Finalise-drill hole designs around-(BURCD020A) to define scale and continuity of mineralisation.
2. Submitting permitting documentation, with no issues foreseen for approvals. Anticipated to be approved within 2 months
3. Select and engage driller.
4. Drill program in Q4 CY2025, targeting zones with known copper-base metal mineralisation and structural complexity.

Multiple Catalysts Across Commodity Classes

| | |
|--|---|
| <p>Copper-Base Metals Minbrie Project</p> | <ul style="list-style-type: none"> • Prioritised drill targeting from Northern corridor • Testing Target Zones using RC with a Diamond Drill tail |
| <p>Graphite Kookaburra Graphite Project</p> | <ul style="list-style-type: none"> • Further updates on strategic discussions and commercialisation plans. |
| <p>Uranium Eyre Uranium Portfolio</p> | <ul style="list-style-type: none"> • Planning drill ready In-fill drill hole at Jungle Dam paleochannels. • Eridani further geochemical field survey around the surface Carnotite mineralisation¹. |
| <p>Green Iron Green Iron Project</p> | <ul style="list-style-type: none"> • Further updates on strategic discussions and commercialisation plans. |

Lincoln is poised to deliver significant value to investors in the rapidly growing critical minerals market.

¹ LML ASX 17 September 2024, High-grade mineralisation located at Eridani Project

Ryan Smith
Interim Chairperson

Mr Smith combines 18 years working in the corporate sector managing financial risk with 16 years' experience as a Member of the Victorian Parliament, serving as a Minister in the Coalition government, Shadow Minister and on Parliamentary Committees. Mr. Smith has significant governance and risk mitigation experience.

Jonathon Trewartha
Chief Executive Officer

Mr Trewartha is a mining engineer and developer with experience in exploration, operations, technical, and regulatory approvals, study and project management and corporate via senior positions in Australia and overseas. He holds a WA First Class Mine Manager's Certificate of Competency.

Julian Babarczy
Non-Executive Director

Mr Babarczy has 20+ years of finance and investment industry experience, including senior positions in investment and portfolio management, company management and directorship. At leading Australian fund manager, Regal Funds Management, he oversaw investments in listed and unlisted portfolio companies.

John Lam
Non-Executive Director

Mr Lam is a highly experienced company director with a background in banking and investment. He held senior positions at Hong Kong Bank of Canada (HSBC Bank Canada), HSBC California, and Hang Seng Bank. He is a fellow of The Institute of Canadian Bankers and a fellow of the Royal Institution of Chartered Surveyors.

Andrew Metcalfe
Company Secretary

Mr Metcalfe is a qualified accountant (CPA) and a graduate member of AICD and Fellow of the governance institute of Australia. He is a professional company secretary and governance adviser and has undertaken CFO and company secretarial duties for listed companies over the past 30 years.

3. Lincoln Minerals ASX announcement dated 16 April 2024 titled "Update to Target Achieved of Doubling the Kookaburra Graphite Project Resource".

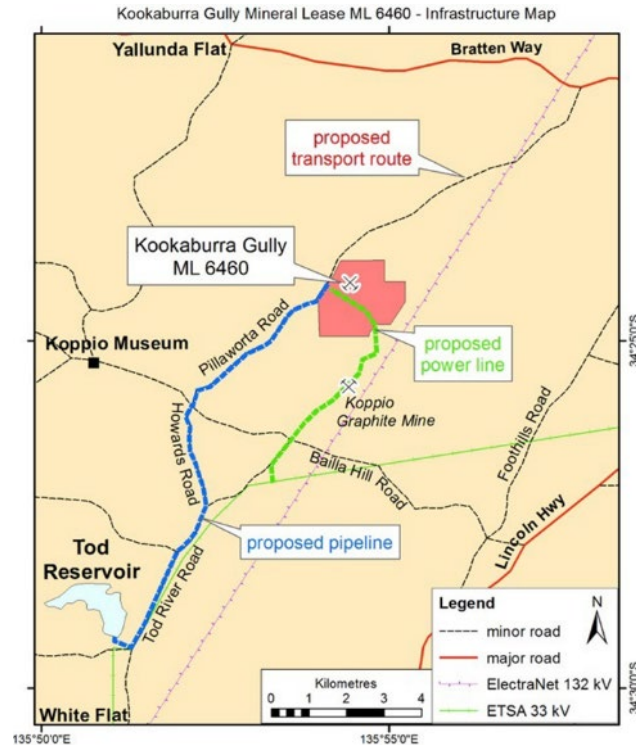

Kookaburra Graphite Project
Strategic Pathway to Partnership and Value Creation

ASX:LML

Kookaburra Graphite Project – First Mover Advantage

Competitive Advantages:

- Ultra-high-grade graphite at surface within an existing Mining Lease
- Located near key infrastructure on South Australia's Eyre Peninsula
- Low start-up capital \$29M¹
- Compelling starter pit supports near-term development potential
- Cash flow positive across the industrial metal cycle
- **Power:** Connect to SA Power Network via a dedicated ~6km, 33kV powerline.
- **Water:** Initially bore water connecting to SA Water mains (~13km long)
- **Regional Centre:** Airport and housing options located within 25 minutes.
- **Export:** Concentrate to be exported through Port Adelaide

¹LML ASX announcement dated 28 October 2024, titled "Kookaburra Graphite Project PFS progresses Lincoln's aim to be Australia's Next Graphite Producer".

Kookaburra Graphite Project – Compelling economics

Compelling project economics

- Pre-tax NPV10 of A\$114m or (US\$77m);
- Pre-tax IRR of 41%;
- Start-up capital requirement of A\$29m (US\$19m);
- Average Cash EBITDA¹ of ~A\$23m (US\$15m);
- Average Cash EBITDA¹ margin of 42%.

**Strong Financial
metrics**

**Low Capital options
and logically staged
approach**

**Strong low
operating cost which
will support the project
through the cycle**

¹LML ASX announcement dated 28 October 2024, titled “Kookaburra Graphite Project PFS progresses Lincoln’s aim to be Australia’s Next Graphite Producer”. The Company confirms that all the material assumptions underpinning the production target, and the forecast financial information derived from the production target, in the announcement continue to apply and have not materially changed.

² NPV / IRR excludes Land Acquisition Costs (-A\$5m), Government Environment Bond and SEB Payment (-AS 8m), and FS Studies costs, Stage 1 Price US\$850/L Stage 2 Price US\$1000/t FX is 0.67 AU D/US. ³ C1 - includes Mining, Processing, G&A and Logistics. ⁴ ASIC - Includes Mining, Processing, G&A, Logistics, Royalties and Sustaining Capex

Key Financial and Production¹ Metrics

| | US\$m | 17 |

Kookaburra Graphite Project – Positioned for Upside in a Rising Graphite Market

- Pre-tax¹ NPV₁₀ of A\$114m.
- Pre-tax¹ IRR of 41%;
- Start-up capital¹ requirement of A\$29m
- Average Cash EBITDA¹ of ~A\$23m
- Average Cash EBITDA¹ margin of 42%.

NPV² (A\$M) and graphite price (US\$/t real FOB, Stage 1 and Stage 2 pricing)

The project¹ has a positive NPV through the expected price cycle, with a Free Cash Flow break-even price ~US\$655/t³

Lincoln offers strong exposure to anticipated graphite price growth

¹ LML ASX announcement dated 28 October 2024, titled "Kookaburra Graphite Project PFS progresses Lincoln's aim to be Australia's Next Graphite Producer". The Company confirms that all the material assumptions underpinning the production target and the forecast financial information derived from the production target, in the announcement continue to apply and have not materially changed..

² NPV / IRR excludes Land Acquisition Costs (~A\$5m), Government Environment Bond and SEB Payment (~A\$8m), and FS Studies costs, Stage 1 Price US\$850/t, Stage 2 Price US\$1000/t FX is 0.67 AUD/US.

³ Break Even Cashflow = Costs / Concentrate Produced.

Uranium Targets

Multiple Drill-Ready Targets in Emerging Uranium Province

ASX:LML

Uranium – Strategic Position in Leading Province

Lincoln has multiple highly prospective uranium targets across its existing tenement portfolio all located in South Australia's emerging uranium province.

Known uranium mineralisation exists on each project area, including historical drilling and recent surface sampling results.

Highlights from historic work include:

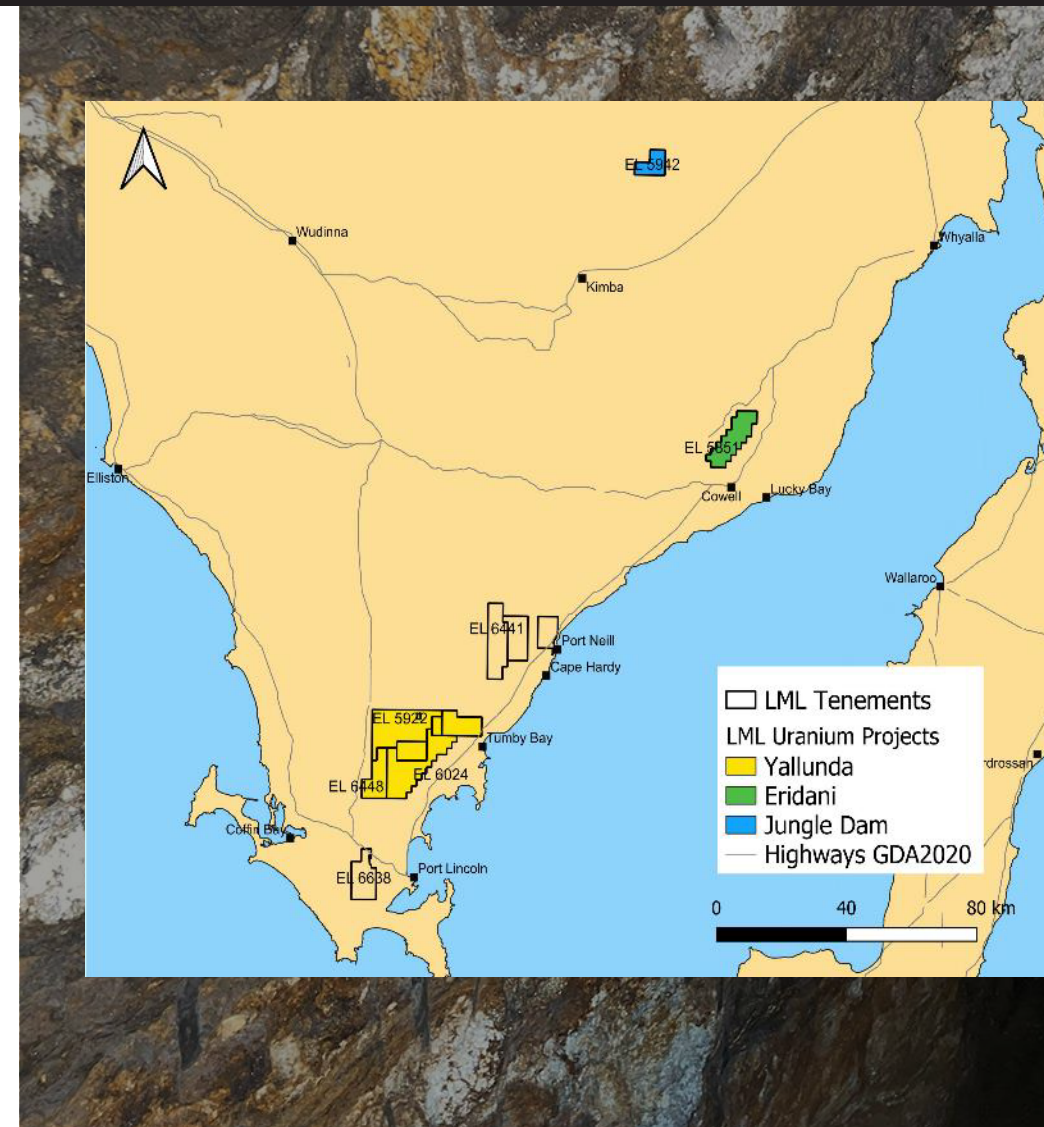

- **Jungle Dam** – intersected up to **570 ppm U** in scout drilling¹;
- **Yallunda** – Historic drill hole KA4² intersected up to **350 ppm U** near contact with intrusive granite;
- **Yallunda** – Field mapping graded up to **1.08% U** using portable Niton XRF analysis southwest of KA4 along the regional radiometric trend³.

Highlights from recent work include:

- **Yallunda** – Identified potential source rock, follow up work required.
- **Eridani** – First round of field sampling confirms surface **Carnotite** mineralisation⁴.

Located close to existing deposits is same geological setting:

- Lincoln's uranium projects have known analogues in similar geological settings which provide strong confirmation of prospectivity and confirm scale potential.

¹ LML ASX 21 December 2007, Drilling results at Wilcherry. ² LML ASX 14 October 2024, Uranium Exploration to Commence at Yallunda.

³ LML ASX 30 October 2009, Quarterly Activities Report. ⁴ LML ASX 17 September 2024, High-grade mineralisation located at Eridani Project. The pre-2012 information was prepared and first disclosed under the JORC Code 2004. It has not been updated since to comply with the JORC Code 2012 on the basis that the information has not materially changed since it was last reported.

Key Catalysts:

Eridani

- Soil sampling program following up on initial ground reconnaissance
- Follow-up AEM survey to define structures over the region

Jungle Dam

- Drilling campaign

Yallunda

- Re-assay intervals of interest from historic Centrex and other cores, as they were not assayed for uranium
- Follow-up AEM survey to define structures over the region
- Advanced geophysical surveys and sampling to pave the way for high impact drill campaign

High Purity Iron & DRI Project
Advancing Strategic Partnerships

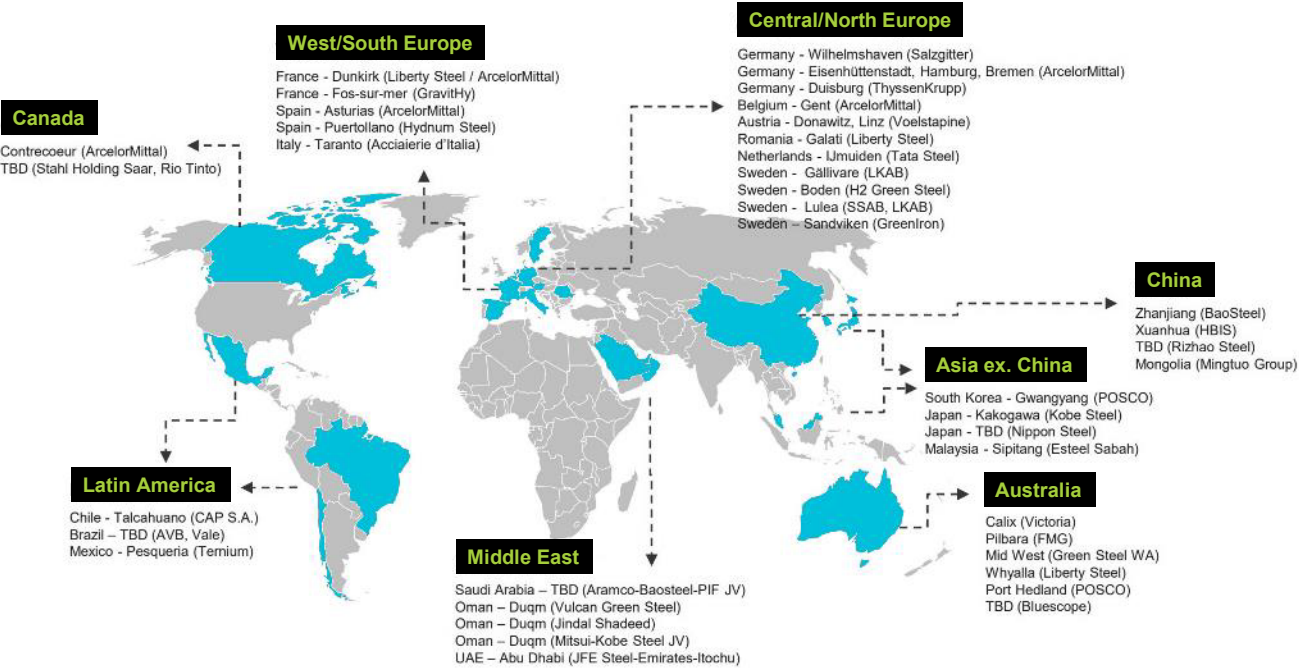

ASX:LML

Direct Reduction Iron is a Growing Market

Demand for Direct Reduction Iron Rising: Surge in Electric Arc Furnace builds driving need for high-grade DRI material

Sources: Wood Mackenzie

Only about 5% of the world's iron ore is suitable for use in electric arc furnaces. Lincoln Minerals is part of that 5%.

Sources: World Steel Association Data

High Purity Iron and DRI Project – Advanced and Strategically Positioned

- 100% Lincoln-owned Australian assets
- **Lower capital requirements** with major infrastructure nearby; less than **5km** from **power**, **15km** from mains **water**¹, and within **60km** of one **active port** and **two approved** but yet-to-be-built **ports**.
- **Scalable 1.1Bt @ 25.8 Fe%**¹
- **Producing high-purity iron and Direct Reduction Iron (DRI) concentrate** with a **coarse-grind**, **without** the need for **flotation**. P80 -75 µm can produce up to **+69% Fe concentrate**.²
- **Positioned for rapid development**, leveraging **\$75M** in previous feasibility studies.
- Well aligned with SA and Federal Government initiatives supporting a domestic green steel industry.
- **Next steps:** Partnering to complete a **Definitive Feasibility Study** and a **Mining Lease**.

Location

Location of Lincoln Mineral's projects in South Australia

¹Within LML's previously announced 1.2Bt project, ASX LML announcement 31 March 2024, "Lincoln confirms strategic 1.2 billion tonne magnetite Mineral Resource on Eyre Peninsula". A complete breakdown by Resource classification is provided on Appendix 1
